# 1.0 Introduction

## 1.1 Project Overview

Forward Pinellas, the Pinellas County Metropolitan Planning Organization (MPO), is working with the City of St. Petersburg and the Skyway Marina District (SMD) representatives to evaluate the potential for repurposing travel lanes on 34<sup>th</sup> Street South from 54<sup>th</sup> Avenue South to 22<sup>nd</sup> Avenue South. This report provides a review of the existing conditions, future travel demand, typical sections and future conditions for the two alternatives (No Build and Build), and public involvement related to the lane elimination project. The study area can be found on **Figure 1.1**.

## 1.2 Skyway Marina District Plan

The SMD encompasses the segment of 34<sup>th</sup> Street South from 54<sup>th</sup> Avenue South to 30<sup>th</sup> Avenue South, including the businesses along the east and west sides of the corridor. The SMD's vision for the area is to have an activity center in southern Pinellas County that includes shopping, dining, and entertainment options. Currently, plans exist for three new large-scale multifamily housing projects which will result in increased demand for bicycle, pedestrian, and transit accommodations. The three projects - the Sur Club, the Addison Skyway Marina, and Marina Walk - are set to add hundreds of apartments to the area. In addition, the SMD looks to improve the streetscape and multimodal transportation through this corridor, which can be facilitated through lane repurposing. The Skyway Marina District Plan can be found in **Appendix B**. The Plan includes the District's goals, actions, and implementation strategies.

## 1.3 Transit Enhancement Plans and Projects

Forward Pinellas recently completed an evaluation of the potential for express bus service in and around the study area. The study resulted in recommendation for two route options as preferred concepts to connect southern Pinellas County, including Eckerd College and the Skyway Marina District, to the Gateway area. For both options, the southern portion of the route follows the current Route 34 corridor between Eckerd College and Grand Central Station. The northern portion of the routes travel either to downtown St. Petersburg and then Gateway (Option 1), or directly to Gateway via 34th Street North/Gandy Boulevard (Option 2). Service along both route options would operate more like a limited stop express bus service, with fewer stops than a local bus service, but with more frequent stops than a more traditional express bus service.

Additionally, the City of St. Petersburg adopted a Complete Streets Plan in May of 2019 which calls for a potential future lane re-allocation along 34<sup>th</sup> Street South from 54<sup>th</sup> Avenue South to 22<sup>nd</sup> Avenue South. Bus Rapid Transit is the proposed facility in the plan.

Furthermore, seven bus stop shelters have been recently installed along 34<sup>th</sup> Street South as a local investment to support transit. These new shelter installations include solar lighting and are located at 11<sup>th</sup> Ave S, 46<sup>th</sup> Ave S, 38<sup>th</sup> Ave S, 36<sup>th</sup> Ave S, 32<sup>nd</sup> Ave S, 36<sup>th</sup> Ave S, and 50<sup>th</sup> Ave S.

## 1.4 Purpose and Need

To support the delivery of enhanced transit service along the corridor and implementation of the Skyway Marina District Plan, Forward Pinellas is currently considering repurposing the segment's existing outside lanes to bus-only (BAT) lanes. As described in greater detail in Section 4.0 of this report, a buffer stripe could be added between the new BAT lane and travel lane by narrowing the existing lanes. As an alternative, the additional width could be used to widen the new BAT lane to 13 feet. The sidewalk would be widened to 10 feet, where feasible with this project, or to the extent feasible within the right-of-way (ROW). The proposed BAT lanes would allow for emergency vehicle use, as well as for general purpose travel during an evacuation. This, combined with the SMD vision of increased attractors, is expected to increase bus ridership in this area. This report provides analysis for two alternatives:

- The 6-Lane Configuration (No Build Alternative) which has no changes to the existing year (2018) lane geometry or traffic control features within the project area, and
- The 4-Lane Configuration (Build Alternative) which allows for a 6-lane typical section with four lanes dedicated to general purpose travel and the two outside lanes repurposed as BAT lanes.

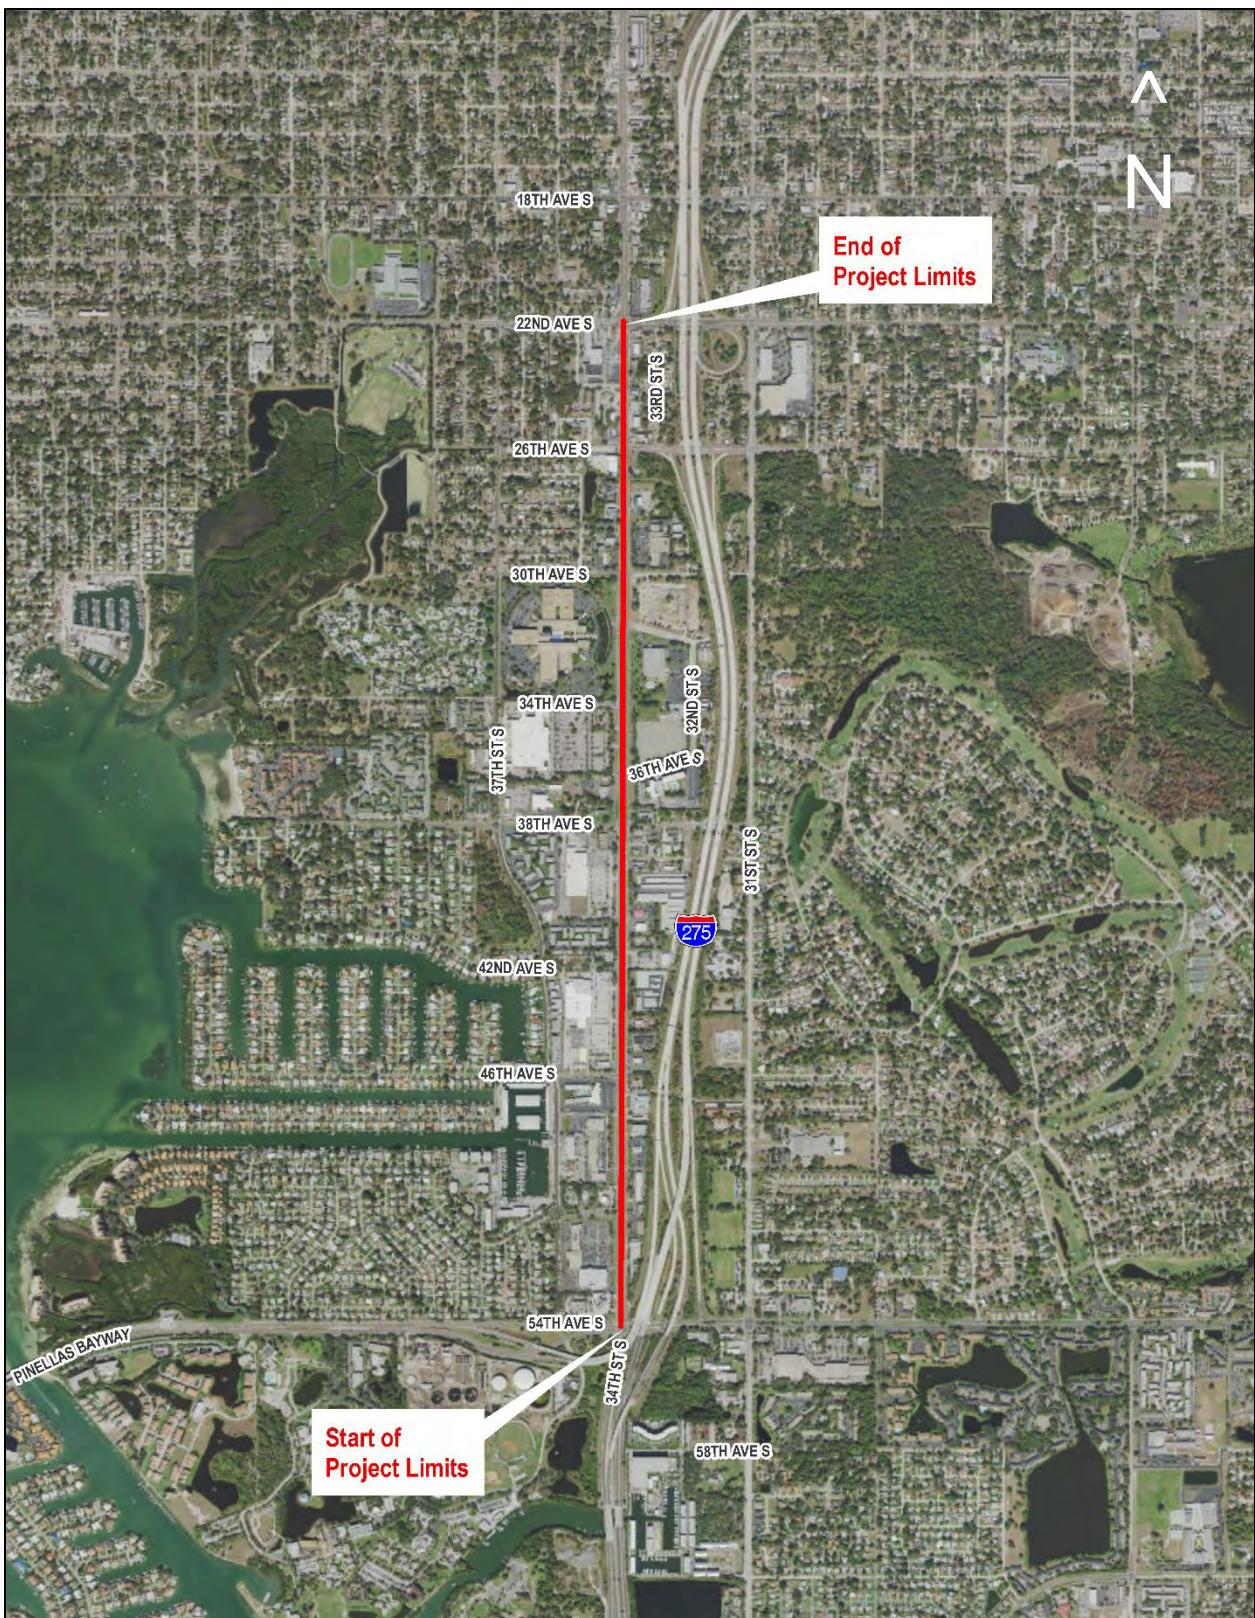

Figure 1.1. 34<sup>th</sup> Street South Project Location Map

## 2.0 Existing Conditions

### 2.1 Roadway and Intersection Characteristics

34<sup>th</sup> Street South is part of the US Highway 19 north-south arterial and is designated as an evacuation route. **Figure 2.1** shows the existing conditions typical section. 34<sup>th</sup> Street South has two inside lanes ranging from 10 to 12 feet and one 13-foot outside lane in each direction with curb and gutter to the outside and an 11-foot median. Sidewalks on either side of the road range from 5 to 6 feet. Two local bus routes, routes 34 and 90, run along 34<sup>th</sup> Street South within the study area. The posted speed limit on 34<sup>th</sup> Street South is 45 miles per hour (mph) between 54<sup>th</sup> Avenue South and 26<sup>th</sup> Avenue South. South of 26<sup>th</sup> Avenue South it is 40 mph through the end of the study limits at 22<sup>nd</sup> Avenue South.

This segment of 34<sup>th</sup> Street South is a commercial corridor with several driveways that access restaurants, hotels, shopping centers, a business park, and St. Petersburg College – Allstate Center. Behind the frontage properties on the west side of the corridor is predominantly residential land use. Behind the land uses on the east side of the corridor is I-275. There are six signalized cross streets within the study area.

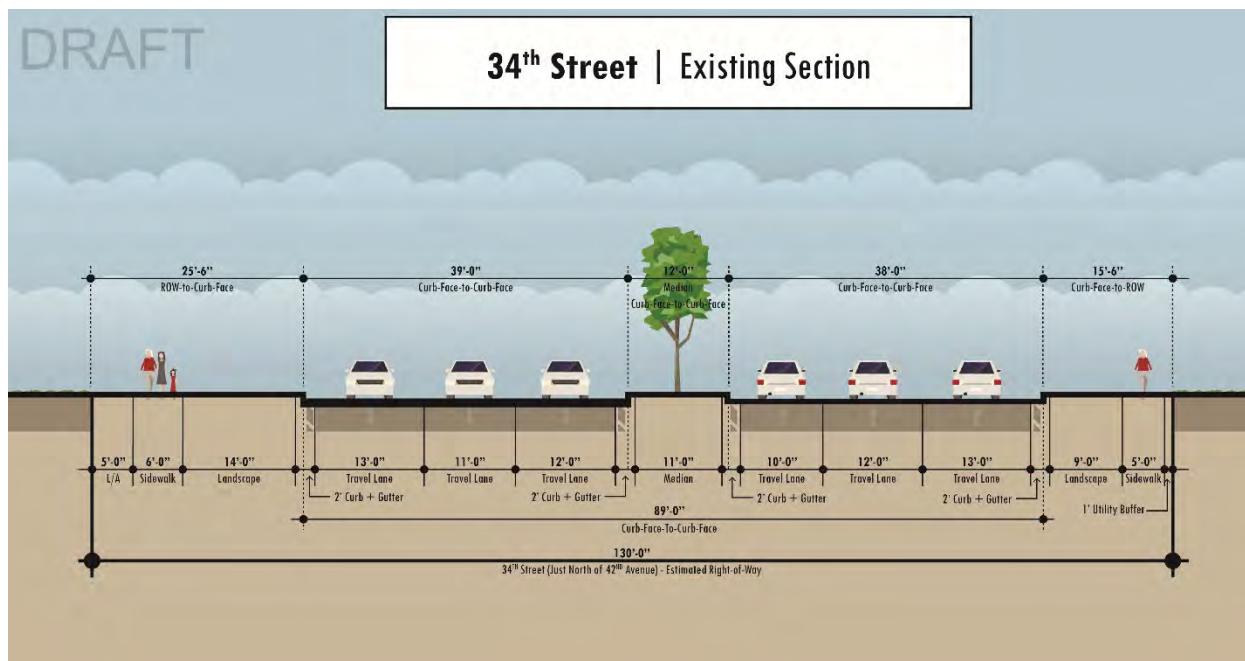

Figure 2.1. 34<sup>th</sup> Street South Existing Conditions Section

### 2.2 Traffic Data Collection

Traffic counts were collected along 34<sup>th</sup> Street South within the study area. Peak period turning movement counts were collected between April 3, 2018 and April 11, 2018 at six intersections from 7:00 AM to 9:00 AM and 4:00 PM and 6:00 PM. **Appendix C** shows the traffic count data.

## 2.3 Traffic Parameters

The peak-to-daily ratios (K-pk), directional distribution (D-pk), and 24-hour percentage of trucks (T24) were measured based on the results of the traffic counts provided by the City of St. Petersburg. The AM peak hour begins at 8:00 AM and has a Peak-Hour Factor (PHF) of 0.91. The PM peak hour begins at 5:00 PM and has a PHF of 0.96. The PHF compares the traffic volume during the busiest 15-minutes of the peak hour with the total volume during the peak hour. This provides an indication of how consistent traffic volume is during the peak hour. In the AM and PM peak period, the southbound direction on 34<sup>th</sup> Street South is the peak direction of travel. The network has an average percentage of heavy vehicles of 3.0 percent. The measured traffic parameters were compared to historical data provided by the Florida Department of Transportation (FDOT) *Florida Traffic Information (FTI)* 2016. The historical data is shown in **Appendix D**.

These sources were also used to determine the design hour truck percentage (DHT), which is generally taken as half of the existing 24-hour percentage of trucks (T24) based on the *FDOT Project Traffic Forecasting Handbook, 2014* methodology. The DHT was developed using the traffic count data and historical data. The traffic parameters recommended for the study area are as follows:

$K_{std} =$	9.0 percent (proportion of AADT occurring within the peak hour)
$D =$	56.0 percent (percentage of the total, two-way design hour traffic traveling in the peak direction)
$DHT =$	2.0 percent on all streets

A  $K_{std}$  of 9.0 percent is recommended by FDOT for urbanized areas and the D-factor of 56.0 percent is within the thresholds recommended in the *FDOT Project Traffic Forecasting Handbook*. The intent of selecting the appropriate design-hour traffic factors is to ensure that the facility is designed to accommodate a specific level of future traffic loadings. A Peak-Hour Factor (PHF) of 0.95 was used in the future year analyses.

## 2.4 Development of Existing Year (2018) Traffic Volumes

Annual Average Daily Traffic (AADT) volumes were estimated by dividing the total PM peak hour approach and departure volumes on each segment by the  $K_{std}$ . The AM and PM Directional Design Hourly Volumes (DDHVs) were developed by applying  $K_{std}$  and D to the AADT volumes and applying the existing measured turning movement count percentages to the DDHV to develop the turning movement proportions. A manual smoothing process was performed to adjust the counts so that traffic flows were not too high or low when compared to the field-measured counts and that the design factors were reasonably maintained. The existing year (2018) volumes were used as a basis for future volume projections. **Figure 2.2** shows the existing year (2018) AM and PM peak period DDHVs. Existing year (2018) volume development calculations can be found in **Appendix C**.

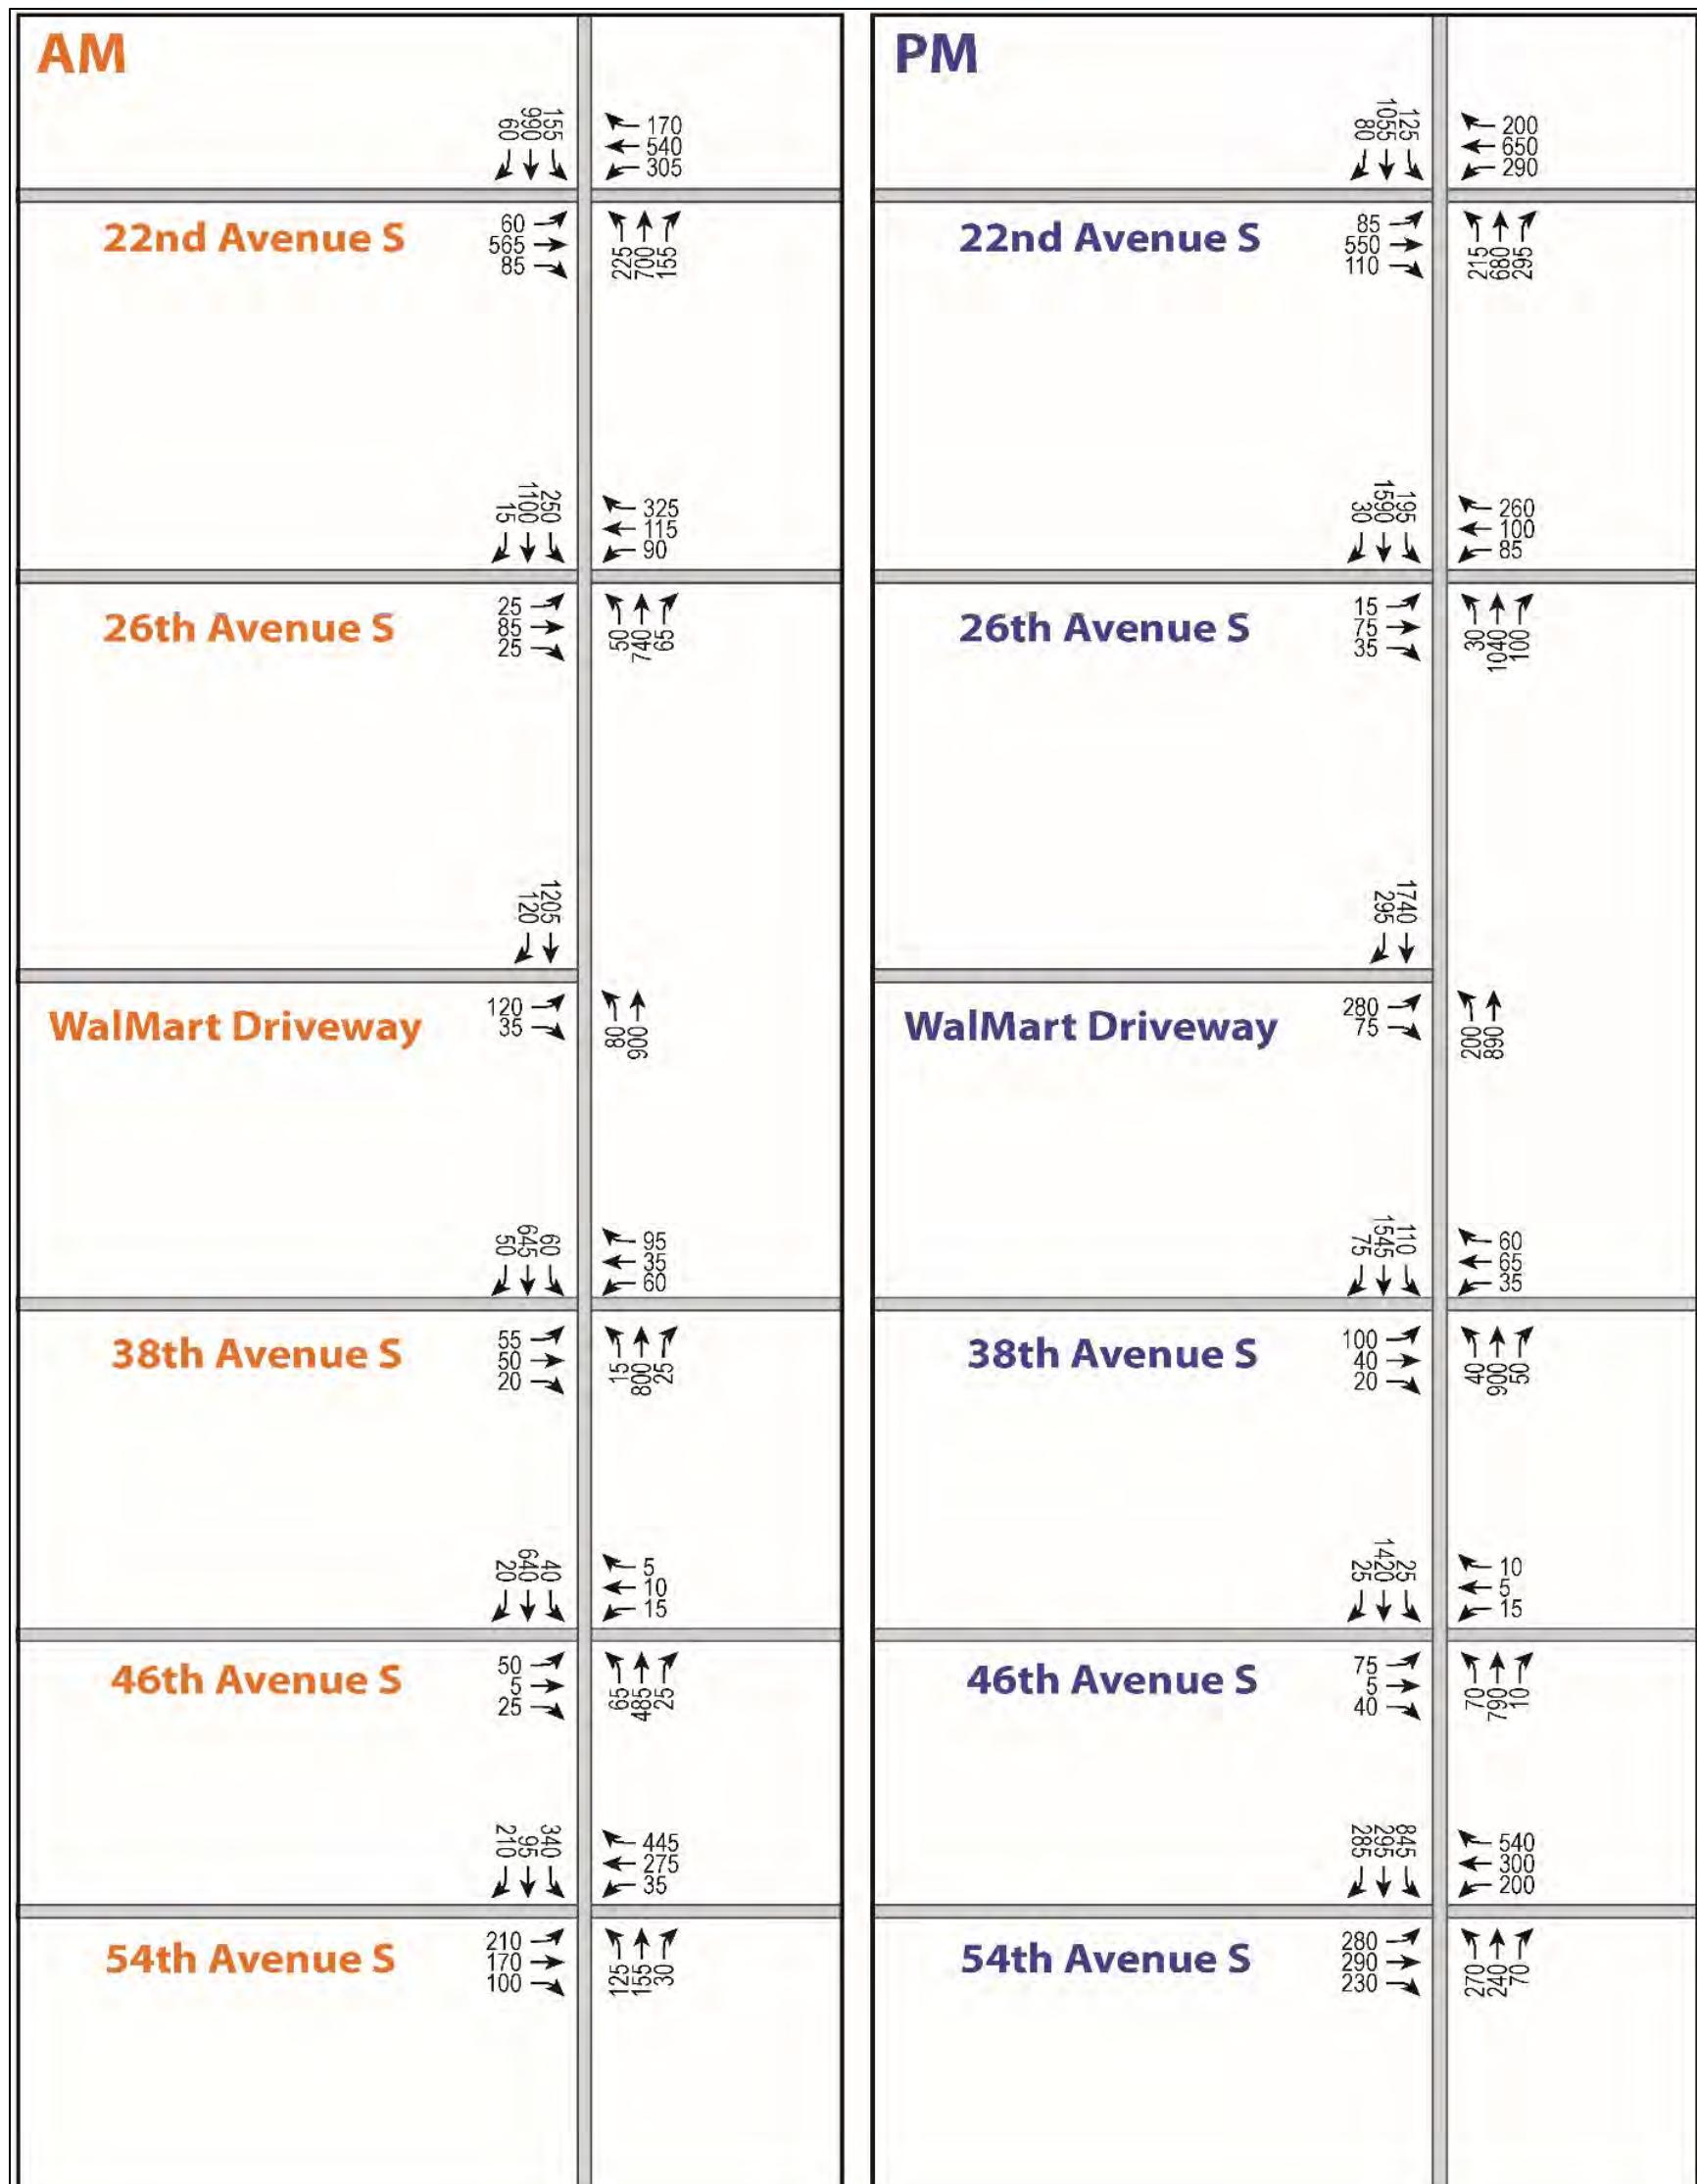

Figure 2.2. Existing Year (2018) 34<sup>th</sup> Street South DDHV

## 2.5 Crash Analysis

Crash data for the five years between 2013 and 2017 was obtained from FDOT and Forward Pinellas. A total of 590 crashes occurred within the vicinity of the study area during these five years.

**Table 2.1** and **Table 2.2** show the crashes by severity and type, respectively. There were 418 crashes that resulted in no known injuries and 159 that resulted in minor or possible injuries. There were 13 incapacitating crashes within this 5-year span. These 590 crashes resulted in 263 total injuries.

Rear-end crashes account for approximately 38 percent of the total crashes. There were also 101 (17 percent) angle crashes and 3 head-on collisions, which are crash types that have a greater potential for severe injuries. The 82 sideswipe crashes indicate that drivers may have difficulty changing lanes within the study area.

There were 14 collisions involving pedestrians and 7 involving bicyclists. Thirteen crashes involved intoxicated drivers, which were removed from the final set of crashes. It should be noted that two of these crashes resulted in the only fatalities reported on 34<sup>th</sup> Street South, with one of these fatal crashes also resulting in 14 injuries. In addition to intoxication, distracted driving and excessive speeding were contributing factors to this crash. Crash data can be found in **Appendix E**.

**Table 2.1. Crashes by Severity**

Year	Fatal Crashes	Incapacitating Crashes	Non-Incapacitating Crashes	Possible Injury Crashes	No Injury Crashes	Number of Fatalities	Number of Injuries
2013	0	3	10	12	70	0	40
2014	0	4	16	19	93	0	63
2015	0	1	15	23	75	0	56
2016	0	4	9	24	108	0	60
2017	0	1	8	23	72	0	44
Total	0	13	58	101	418	0	263

**Table 2.2. Crashes by Type**

Year	Angle	Head On	Rear End	Sideswipe	Bike	Pedestrian	Other	Total
2013	13	1	38	7	0	2	34	95
2014	25	1	50	17	2	3	34	132
2015	26	1	45	14	2	3	23	114
2016	22	0	48	27	3	3	42	145
2017	15	0	44	17	0	3	25	104
Total	101	3	225	82	7	14	158	590

Of the 590 crashes that occurred on 34<sup>th</sup> Street South, 516 of them occurred at the six study intersections. The intersections with the highest crashes were 34<sup>th</sup> Street South/22<sup>nd</sup> Avenue South and 34<sup>th</sup> Street South/54<sup>th</sup> Avenue South with 188 and 136 crashes, respectively. The highest crash type at both of these locations is rear end crashes, which is usually indicative of vehicles travelling at high speeds and unable to stop in time before reaching the back of queue from a signalized intersection. Sideswipe crashes are the next frequently observed crash types at these locations. Under the lane elimination design, the posted speed limit could be reduced to aid in traffic calming. Depending on the speed reduction percentage, the corresponding crash modification factor (CMF) can range from 0.56 to 0.90, resulting in crash reductions between 10 and 44 percent. Currently,

there are no CMFs related to reducing the number of travel lanes from 6 to 4 or repurposing existing vehicle travel lanes as bus only lanes.

## 2.6 Existing Year (2018) Traffic Operational Analysis

The signalized intersection analyses were conducted using the Highway Capacity Manual (HCM) 2010 Module in Synchro, version 9. The corridor analyses were conducted using Synchro, version 9. The signal timing plans for all six signalized intersections along the study corridor were obtained from the City of St. Petersburg. Existing truck percentages for each approach and the measured global PHFs were used in these models. Synchro results can be found in **Appendix F**. The MOEs discussed in the following subsections were used to analyze the existing configuration and to establish a baseline for comparison with the future traffic analysis years.

### 2.6.1 Intersection Delay Analysis

**Table 2.3** shows the existing year (2018) approach and overall intersection control delay and Level of Service (LOS) results for the existing configuration of the six signalized intersections within the study corridor. The delay results were extracted from Synchro and LOS thresholds were taken from the Highway Capacity Manual (HCM) 2010. Synchro delay results by movement type can be found in **Appendix F**.

The 34<sup>th</sup> Street South/54<sup>th</sup> Avenue South and 34<sup>th</sup> Street South/22<sup>nd</sup> Avenue South intersections experience overall delays over 60 seconds/vehicle (s/veh) during both the AM and PM peak hours, resulting in LOS E or worse. The eastbound approach of the 34<sup>th</sup> Street South/54<sup>th</sup> Avenue South intersection incurs delay over 110 s/veh during the AM and PM peak hours, while the westbound approach incurs delay over 200 s/veh during the PM peak hour. All approaches of the 34<sup>th</sup> Street South/22<sup>nd</sup> Avenue South intersection incur delays over 55 sec/veh in both the AM and PM peak hours.

Most of the eastbound and westbound approaches at the intermediate intersections operate at LOS E or worse in both the AM and PM peak hours, while the northbound and southbound approaches operate at LOS D or better, indicating that the cross streets may not receive adequate green time or that the geometries may not be sufficient.

**Table 2.3. Existing Year (2018) Intersection Delay (s/veh)**

Intersection	Intersection Approach								Overall Intersection	
	Eastbound		Westbound		Northbound		Southbound			
	Delay	LOS	Delay	LOS	Delay	LOS	Delay	LOS	Delay	LOS
<b>AM</b>										
34th Street S & 54th Avenue S	111.6	F	34.3	C	56.0	E	63.4	E	60.3	E
34th Street S & 46th Avenue S	55.8	E	52.2	D	0.2	A	9.2	A	8.9	A

34th Street S & 22nd Avenue S	75.0	E	85.9	F	76.5	E	55.5	E	72.6	E

\*HCM 2010 results are not available for this intersection due to signal phasing scheme. Synchro analysis is reported instead.

## 2.6.2 Intersection Queue Analysis

**Table 2.4** shows the 95<sup>th</sup> percentile queue length results for the existing year (2018) existing configuration at the signalized intersections along 34<sup>th</sup> Street South rounded to the nearest 25 feet (ft). The 34<sup>th</sup> Street South/54<sup>th</sup> Avenue South intersection experiences excessive queueing along the eastbound and westbound approaches. The eastbound left and westbound left and right queue lengths exceed the available turn bay storage and spill into the through lane, which contribute to the high delays associated with these approaches. The northbound and southbound left turn bays also experience excessive queueing in the PM peak hour.

The 34<sup>th</sup> Street South/22<sup>nd</sup> Avenue South intersection experiences excessive queueing on the eastbound and westbound approaches due to the heavy through and right movements utilizing a shared through-right lane. These queue lengths exceed 500 ft in both the AM and PM peak hours which impact business driveway and cross streets on the west leg and the southbound I-275 off-ramp on the east leg. In addition, the northbound left queue length extends beyond the available left-turn storage bay, forcing vehicles to spill out into the through lanes.

**Table 2.4. Existing Year (2018) Intersection Queue Length (ft)**

Intersection	EBL	EBT	EBR	WBL	WBT	WBR	NBL	NBT	NBR	SBL	SBT	SBR
<b>AM</b>												
34th Street S & 54th Avenue S	625	100	0	75	175	575	225	150	50	300	175	0
34th Street S & 46th Avenue S	150	0	0	50	0	0	25	25	25	50	200	225
34th Street S & 38th Avenue S	125	0	125	125	0	250	50	375	400	125	25	25
34th Street S & 34th Avenue S*	100	-	50	-	-	-	150	50	-	-	300	100

34th Street S & 22nd Avenue S	150	575	575	300	525	525	750	350	375	375	475	525
<b>PM</b>												
34th Street S & 54th Avenue S	1025	200	0	825	225	1475	725	200	125	675	450	0
34th Street S & 46th Avenue S	225	0	0	50	0	0	25	0	25	0	25	25
34th Street S & 38th Avenue S	225	0	100	75	0	250	100	425	450	200	25	25
34th Street S & 34th Avenue S*	200	-	50	-	-	-	300	50	-	-	625	150
34th Street S & 26th Avenue S	25	0	200	175	175	675	75	50	50	275	525	550
34th Street S & 22nd Avenue S	200	550	550	275	750	750	600	475	475	275	525	575

\*HCM 2010 results are not available for this intersection due to signal phasing scheme. Synchro analysis is reported instead.

## 3.0 Future Travel Demand

Future planned network and development growth plans were reviewed for use in forecasting future volume projections. Various growth patterns were analyzed using different sources to determine the most reasonable method for volume growth.

### 3.1 Development and Network Improvements Review

The study corridor is within the City of St. Petersburg in southern Pinellas County. The SMD community contains 227 acres of land and is bisected by 34<sup>th</sup> Street South between 30<sup>th</sup> Avenue South and 54<sup>th</sup> Avenue South. The corridor is comprised of various land uses, with commercial making up the largest portion at almost 45 percent. Office is the second highest usage primarily due to the Ceridian campus at the northern end of the study area. Other land use activity in the corridor includes residential, industrial, marina, and institutional. The Skyway Marina District envisions the area as a destination for shopping, dining, and entertainment that encourages walkability and multimodal travel. In order to achieve this vision, the Skyway Marina District is actively engaged in planning and neighborhood improvement activities in coordination with the City of St. Petersburg.

**Appendix B** shows the Skyway Marina District Plan for this corridor.

In order to provide a better balance of multimodal options, community planning efforts encouraged by Forward Pinellas are focused on encouraging mixed-use centers, while supporting walkable and economically sustainable neighborhoods.

### 3.2 Population Growth Estimates

Historical population data obtained from the Bureau of Economic and Business Research (BEBR) was used to analyze growth rates that may be applicable in developing future traffic projections. As shown in **Table 3.1**, Pinellas County had a population of about 954,600 in 2016. **Table 3.1** shows the low, medium, and high population estimates for 2020, 2030, and 2040, along with the corresponding growth rates from 2016 to each future year.

**Table 3.1. BEBR Population Growth Rates**

Projection Range	2016 Population	2020		2030		2040	
		Population	Growth	Population	Growth	Population	Growth
Low	954,569	932,400	-0.58%	912,400	-0.32%	887,400	-0.29%
Medium	954,569	967,400	0.34%	995,700	0.31%	1,012,800	0.25%
High	954,569	1,004,900	1.32%	1,083,300	0.96%	1,154,800	0.87%

### 3.3 Development of Future Year Traffic Volumes

The design year (2040) AADT volumes were developed using the Tampa Bay Regional Planning Model, version 8.2 (TBRPMv8.2). The Model's validated base year is 2010 and the most recently adopted Cost-Affordable (CA) Model has a horizon year of 2040. The horizon year (2040) AADT volumes were compared to the existing year (2018) AADT volumes to ensure that reasonable growth was captured by the Model in the study area. In cases where the growth was determined to be unreasonable, a 0.5 percent growth rate was linearly applied to the existing year (2018) volumes

to obtain the design year (2040) volumes. This growth rate was selected due to it falling in between the medium and high growth rate values calculated from the BEBR in **Table 3.1**.

The AM and PM DDHVs were developed by applying  $K_{std}$  and D to the AADT volumes and applying the existing measured turning movement count percentages to the DDHV to develop the turning movement proportions. A manual smoothing process was performed to adjust the counts so that the traffic flows were not lower than existing year (2018) and that the design factors were reasonably maintained. The opening year (2020) volumes were developed by linearly interpolating the turning movement volumes between the existing year (2018) and design year (2040) volumes. **Figure 3.1** and **Figure 3.2** show the design year (2040) and opening year (2020) AM and PM peak-hour volumes, respectively. Plots from the TBRPM, v8.2 can be found in **Appendix G**.

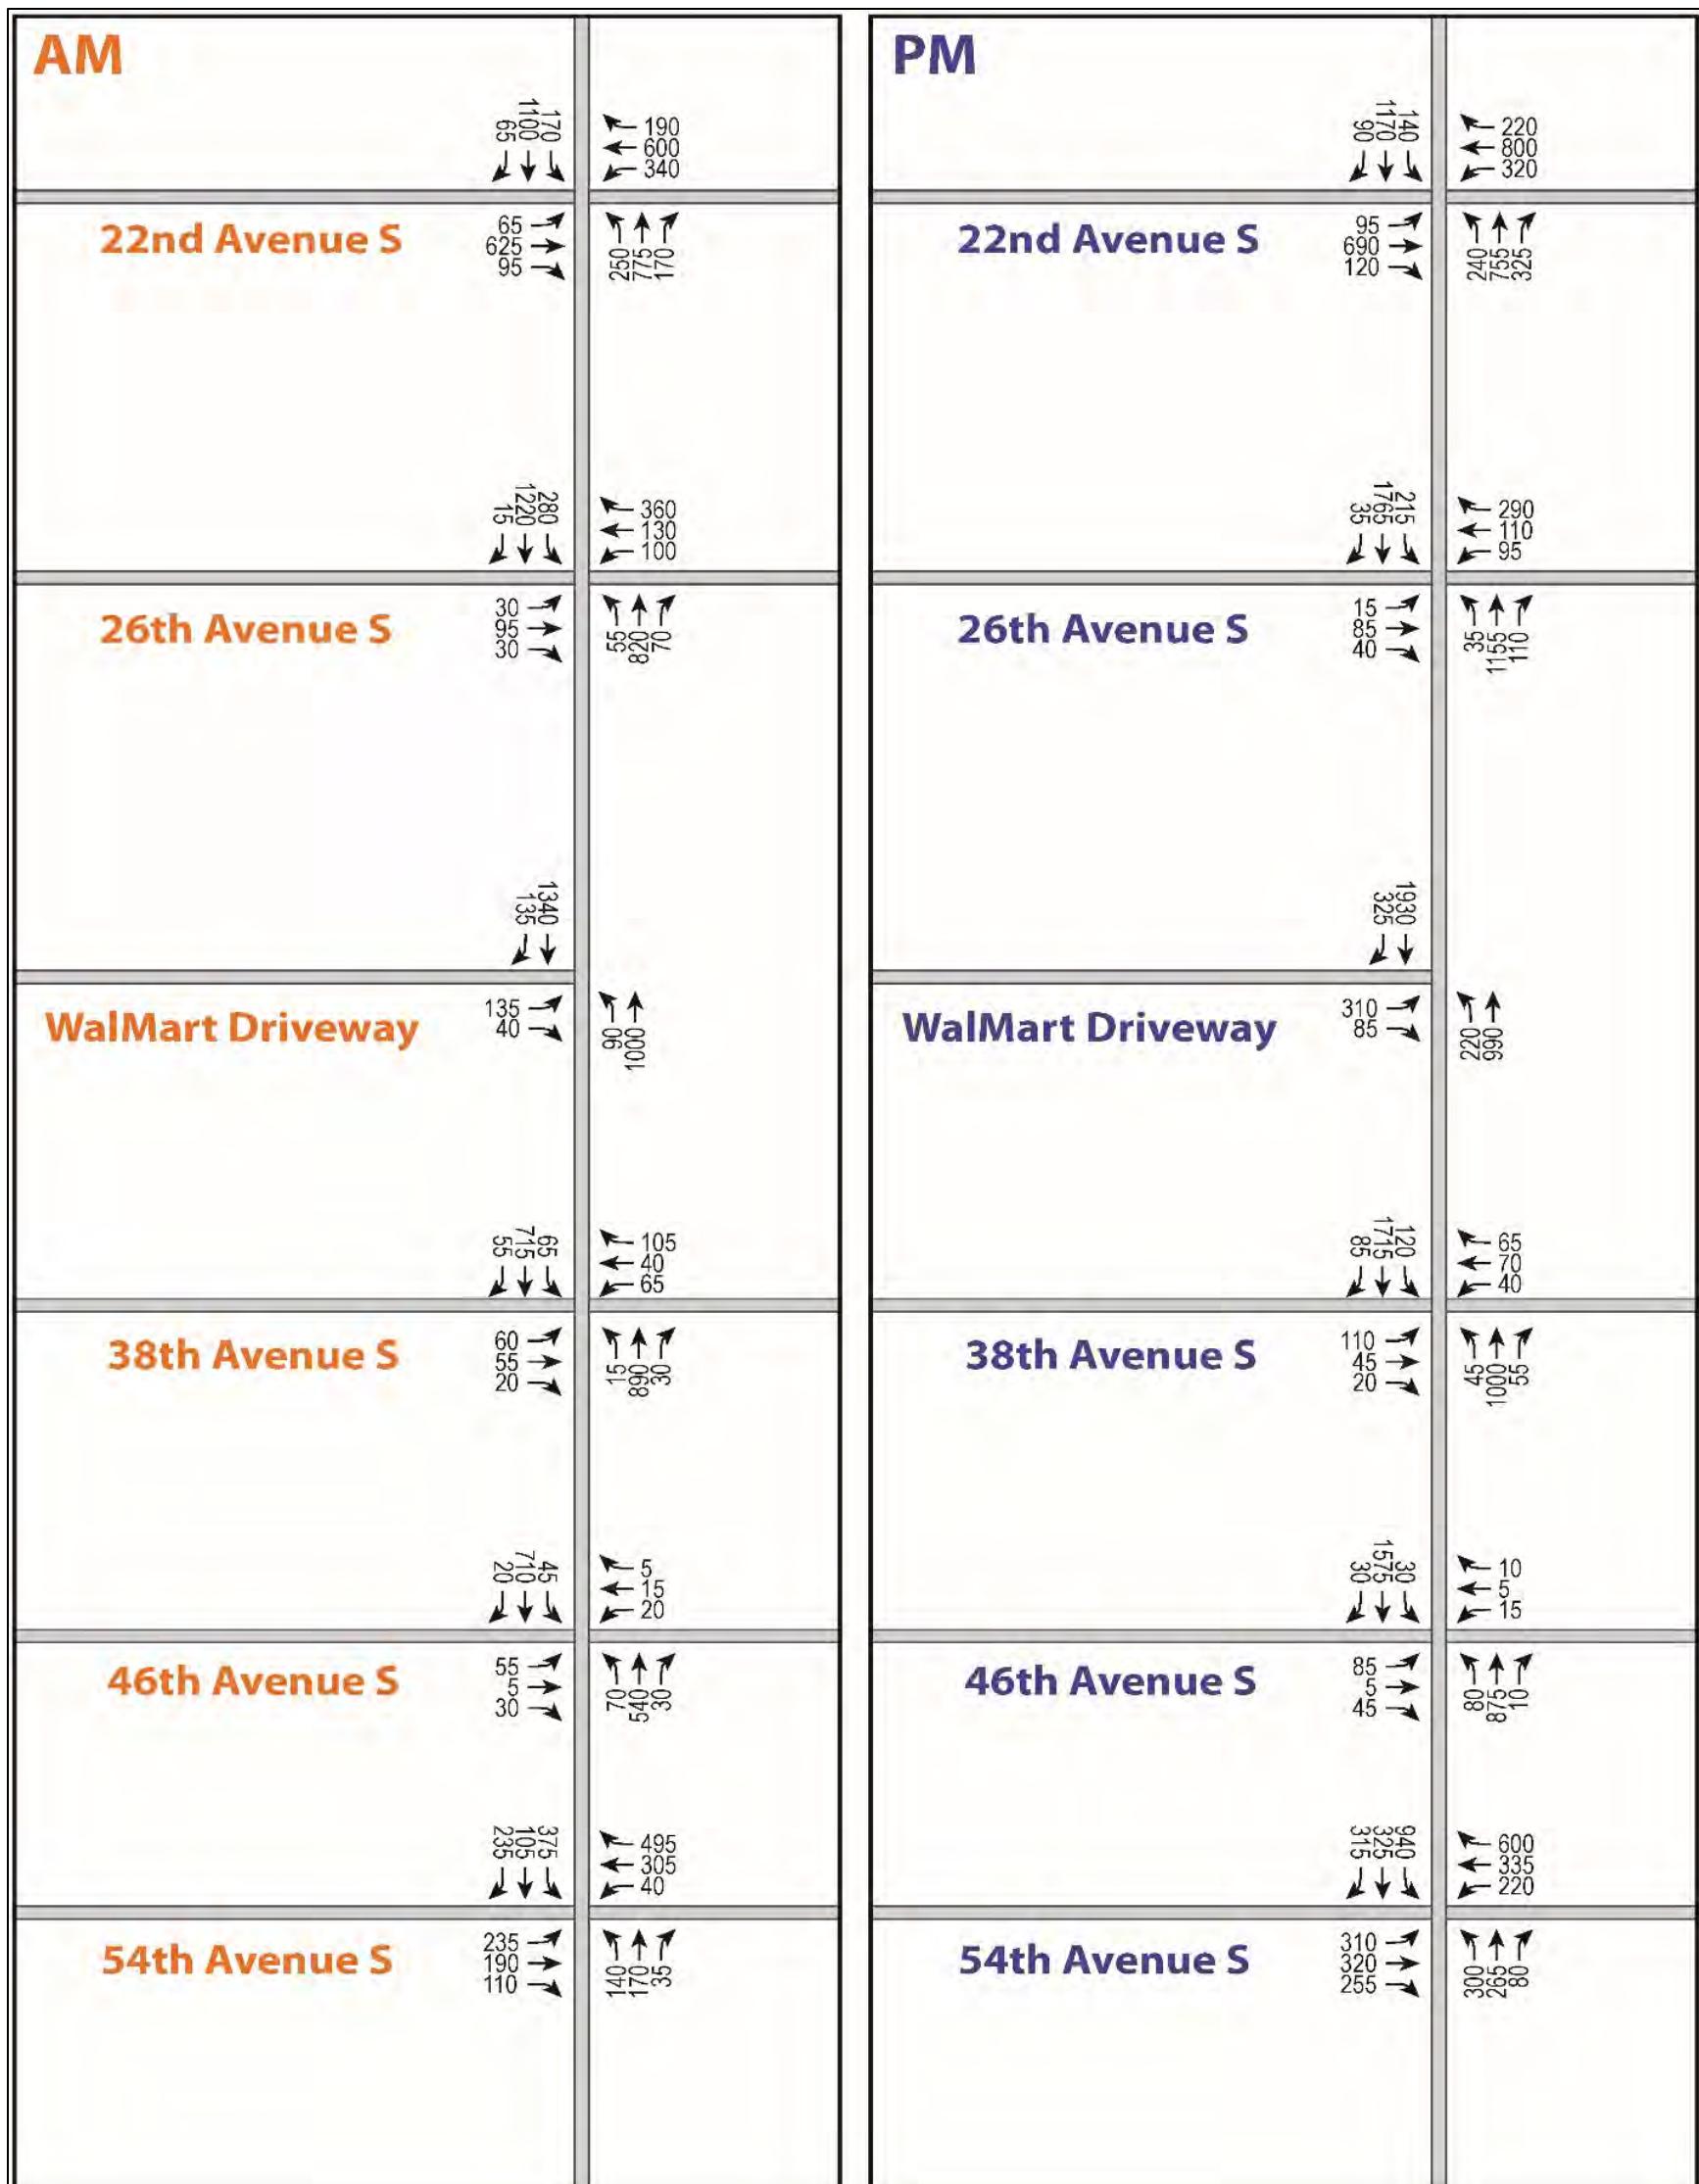

Figure 3.1. Design Year (2040) 34<sup>th</sup> Street South DDHV

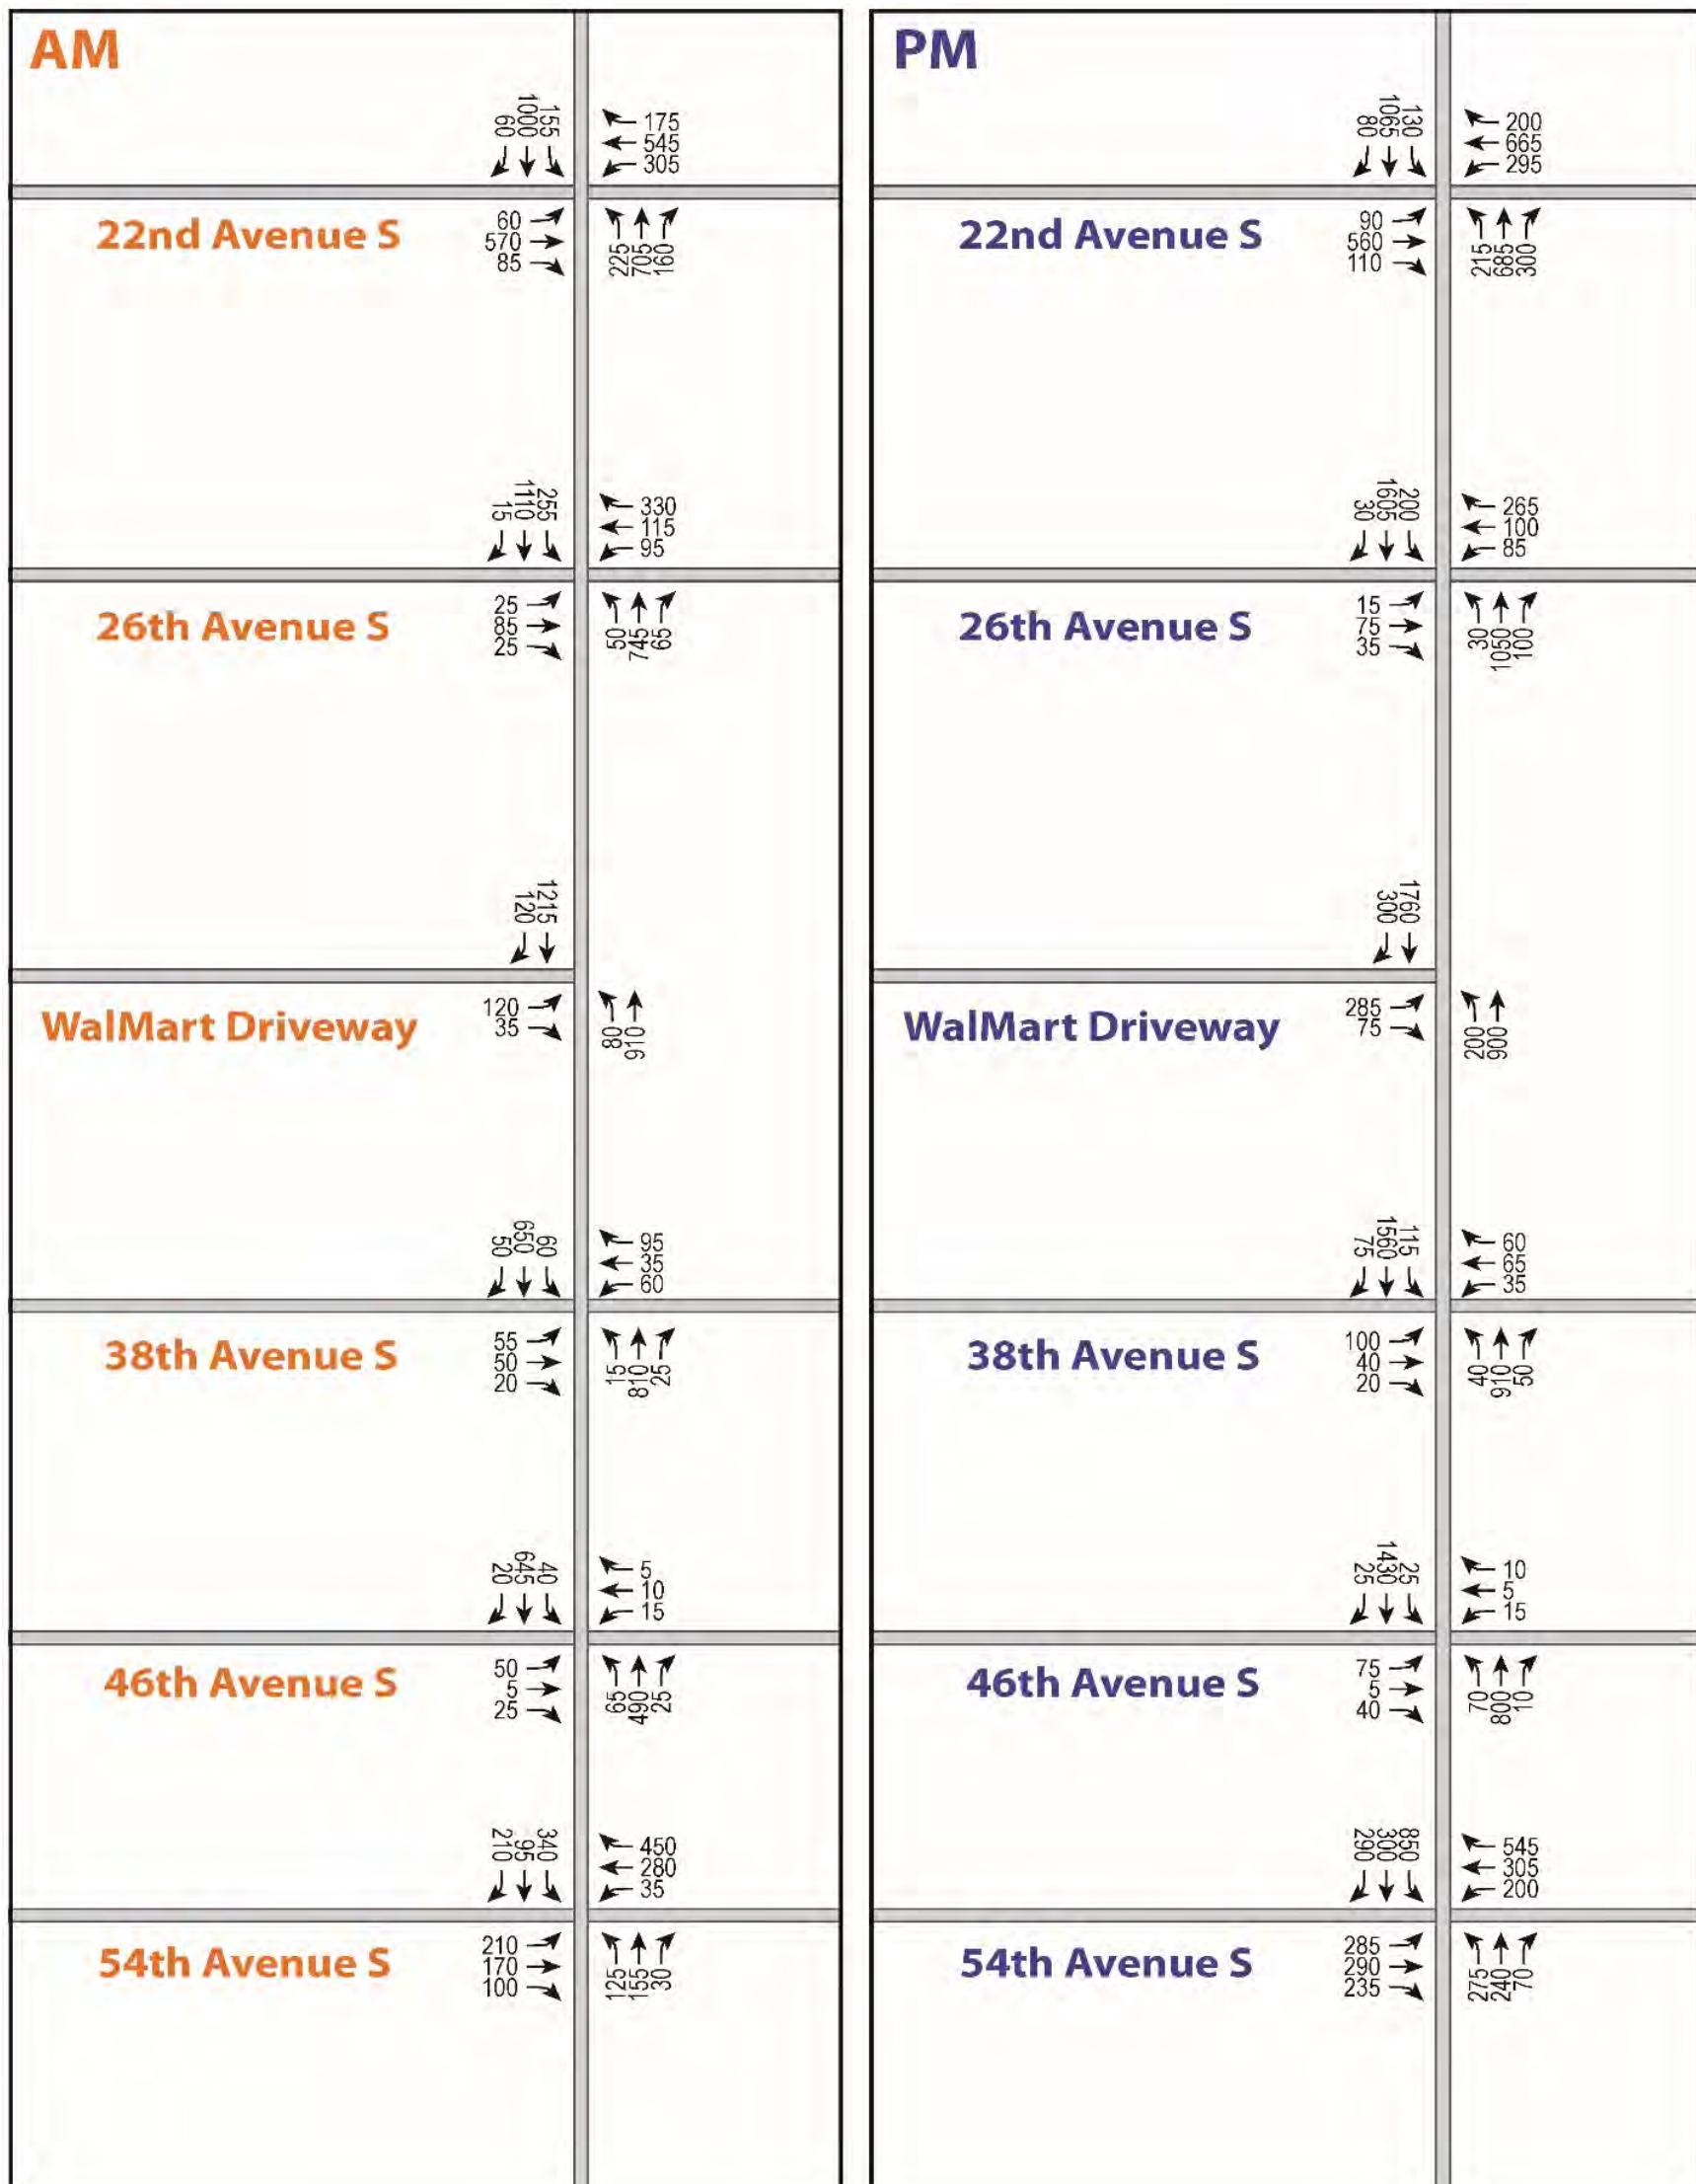

Figure 3.2. Opening Year (2020) 34<sup>th</sup> Street South DDHV

## 4.0 Proposed Design

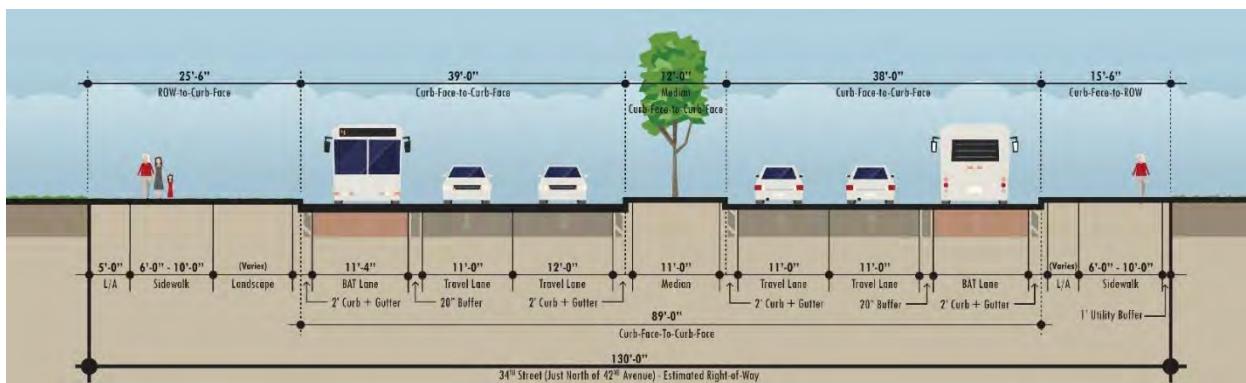

The Florida Department of Transportation (FDOT) District 7 has a planned resurfacing, restoration, and rehabilitation (RRR) project for 34<sup>th</sup> Street South from 54<sup>th</sup> Avenue South to 22<sup>nd</sup> Avenue North. In addition to the RRR project, the section from 54<sup>th</sup> Avenue South to 22<sup>nd</sup> Avenue South is planned to include the following:

- Repurposing outside lanes from general purpose to business access and transit (BAT) lanes (i.e. shared bus and right-turn lanes);
- Widening sidewalks on both sides of the road, where feasible; and
- Adding enhanced pedestrian crosswalks.

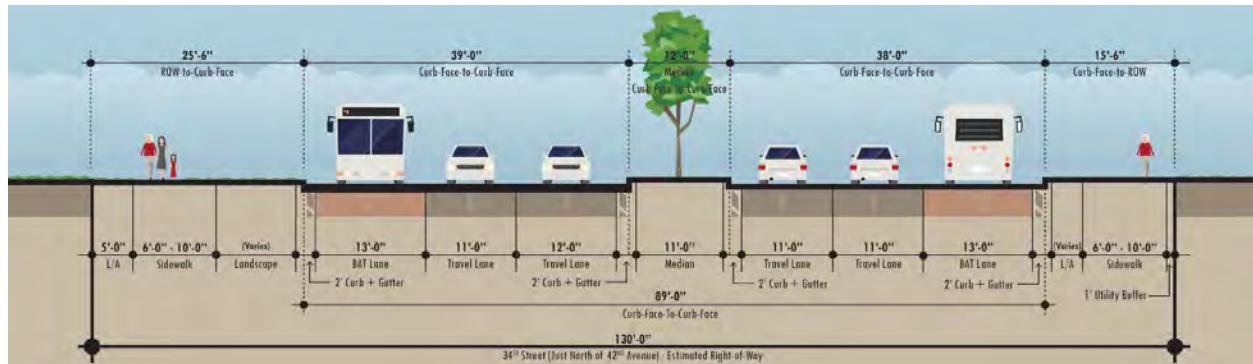

The existing typical section is shown in **Figure 2.1**. Corridorwide conceptual drawings, including BAT lane operation, pavement markings, and proposed crossing locations, can be found in **Appendix H**.

### 4.1 BAT Lanes

The proposed typical section converts the outside travel lane into a BAT lane. As shown on **Figure 4.1**, by narrowing the lanes, a buffer stripe can be added between the BAT lane and travel lane. As an alternative, the additional width could be used to widen the BAT lane to 13 feet (**Figure 4.2**). The sidewalk will be widened to 10 feet, where feasible with this project, or to the extent feasible within the right-of-way (ROW). The proposed typical section would allow for the BAT lanes to be used for emergency vehicles and repurposing for a general purpose travel lane during an evacuation.

**Figure 4.1. 34th Street South Proposed Typical Section with Buffer Stripe**

**Figure 4.2. 34th Street South Proposed Typical Section with Wide Outside Lane**

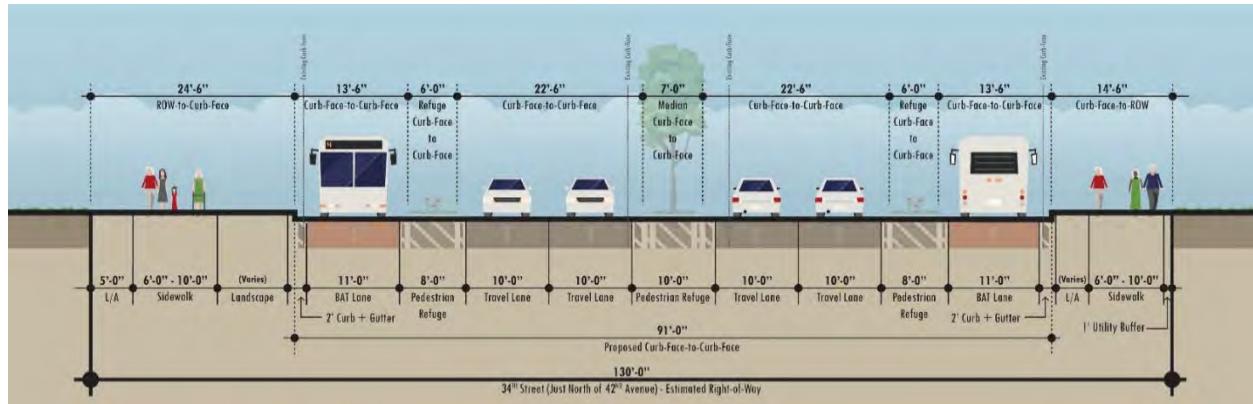

Red paint could be used to mark transition and conflict points. The use of red paint requires approval from the Federal Highway Administration (FHWA). PSTA would likely need to apply for approval before construction begins, as well as agree to maintain and fund the markings. These details would need to be addressed in the design phase of work. Additionally, signage and BUS ONLY pavement marking would be used to communicate the use of the lane. To improve pedestrian safety and access to transit, the existing medians at signalized intersections could be widened and extended to provide refuge. This would also be addressed in the design phase of work.

## 4.2 Widened Sidewalks

A recurring theme of the City of St. Petersburg's public outreach regarding its Complete Streets Plan and other active transportation planning activity is that most people will not ride a bicycle on a road with high speed traffic without a physical barrier between themselves and the adjacent vehicle lanes. Public input received by Forward Pinellas on the subject of bicycling and bicycle safety in Pinellas County confirms this sentiment. The proposed wide sidewalks would provide bicyclists with a barrier from the roadway and a higher level of comfort. In addition, the project corridor is surrounded by an established network of bicycle facilities that include a parallel section of the Skyway Trail within 0.25 mile to the west, a bike lane along the parallel section of 31st Street a quarter mile to the east and an east-west bike lane and trail that connect the Skyway Trail and 31st Street at 38th Avenue South and 46th Avenue South. The proposed wide sidewalks on 34th Street will help to improve the connectivity of the active transportation network while providing bicyclists and pedestrians with improved accessibility and a safer means of traveling within the Skyway Marina District. It is not known at this time where sidewalks can be widened, but it is being analyzed ahead of the design phase.

## 4.3 Enhanced Pedestrian Crosswalks

**Figure 4.5** shows the typical section for potential midblock crossings which includes a narrowing of the center median and inside travel lanes to include an additional pedestrian refuge between the BAT lane and general-purpose lane. The curb is also moved out one foot on either side. The curb rebuild would be limited to about 300 feet. There would be a slight horizontal shift for drivers toward the center of the road, adding a traffic calming element through the pedestrian crossing area. A traffic control device would be installed at the potential midblock crossings near 50<sup>th</sup> Ave S and 42<sup>nd</sup> Ave S. The specific device will be determined in design. The project is not expected to negatively affect school crossings along the corridor.

**Figure 4.3. Proposed Midblock Pedestrian Crossing**

## 4.4 Design Variations

A potential need for the following design variations were identified under the RRR basic services, and is currently awaiting survey to be fully vetted. At this time it is not expected that any additional variations would be needed as a result of introducing the BAT lanes. Final design will occur during the engineering phase of the project.

- Median Width
- Bike Lanes
- Cross Slope
- Lane Width
- Lateral Offset / Horizontal Clearance
- Drop-off Hazard (Optional Service)

## 4.5 Impact of Parking Supply

On-street parking does not currently exist on 34<sup>th</sup> Street South. Therefore, the proposed project will have no impact on existing parking supply.

## 4.6 Existing Posted Speed Limit

The posted speed limit on 34th Street South is 45 miles per hour (mph) between 54th Avenue South and 26th Avenue South. South of 26th Avenue South it is 40 mph through the end of the study limits at 22nd Avenue South. Any changes to the design/posted speed will be coordinated during and after design

## 4.7 Traffic Signal Impacts

At this time it is not anticipated that the proposed design described in this section will result in the addition, removal, or modification of existing traffic signals.

## 4.8 Additional Design Considerations

During the design phase, the following design considerations will be evaluated:

- Potential for lane width variation
- Potential for reduction in design speed
- Modifications to signals
- Modifications to existing drainage systems
- Location and design treatments of midblock pedestrian crossings
- Need for improved lighting for safety at intersections
- Sidewalk widening along the corridor
- Potential for modification or relocation of bus stops

## 5.0 Future Conditions

### 5.1 Design Year (2040) Traffic Operational Analysis

The existing year (2018) Synchro models were used as the basis for the design year (2040) models. A PHF of 0.95 was used for the design year (2040) Synchro analyses since less variability of congestion within the peak hour is expected as volumes grow. DHT percentages were used for each approach of the signalized intersections along 34th Street South rather than the existing truck percentages. Synchro signal optimization was used to determine optimized signal timing for the study intersections along 34<sup>th</sup> Street South. The existing cycle lengths were maintained to allow for continued coordination along the corridor. The signalized intersection MOEs are discussed in this section.

#### 5.1.1 Intersection Delay Analysis

**Table 5.1** and **Table 5.2** show the design year (2040) approach and overall intersection control delay and LOS results for the 6-Lane Configuration (No Build Alternative) and 4-Lane Configuration (Build Alternative), respectively, of the signalized intersections within the study area. The delay results were extracted from Synchro and LOS thresholds were taken from the HCM 2010. Synchro delay results by movement type can be found in **Appendix F**.

The results of the 6-Lane Configuration (No Build Alternative) analysis indicate that one intersection is not expected to meet acceptable FDOT LOS standards in the AM peak period and two intersections are not expected to meet acceptable FDOT LOS standards in the PM peak period. The performance of these intersections are consistent with the existing year (2018) analysis results. The intersections that are expected to underperform are 34<sup>th</sup> Street South/54<sup>th</sup> Avenue South and 34<sup>th</sup> Street South/22<sup>nd</sup> Avenue South. The PM peak period is expected to have the highest incurred delay, with the eastbound and westbound approaches experiencing the highest delays across all intersections.

The results of the 4-Lane Configuration (Build Alternative) analysis indicate that one intersection is not expected to meet acceptable FDOT LOS standards in the AM peak period and two intersections are not expected to meet acceptable FDOT LOS standards in the PM peak period. These intersections are consistent with those of the design year (2040) 6-Lane Configuration (No Build Alternative) results. However, most intersections see a reduction in approach and overall delay; in some case the LOS is improved. This may be due to the right-turn overlap at intersections that allow it, as well as the optimized signal phasing. In addition, the reduction in approach and overall intersection delay may result in improved travel times along the 34<sup>th</sup> Street South corridor.

It should be noted that a new configuration is currently being considered at 34th Street and 54th Ave S. The new configuration would potentially convert the existing southbound left turn/thru lane into a dedicated southbound left turn lane. This potential change was not included in the analysis for this report. For this report the Build configuration for the southbound approach at the 34th Street and 54th Avenue S intersection was analyzed as one left lane, one shared left-thru, and one right.

**Table 5.1. Design Year (2040) 6-Lane Configuration (No Build Alternative)**

\*HCM 2010 results are not available for this intersection due to signal phasing scheme. Synchro analysis is reported instead.

### 5.1.2 Intersection Queue Analysis

**Table 5.3** and **Table 5.4** shows the 95<sup>th</sup> percentile queue length results for the design year (2040) 6-Lane Configuration (No Build Alternative) and 4-Lane Configuration (Build Alternative), respectively, at the signalized intersections along 34<sup>th</sup> Street South rounded to the nearest 25 ft. Synchro queue results can be found in **Appendix F**.

The results of the 6-Lane Configuration (No Build Alternative) analysis indicate that the 34<sup>th</sup> Street South/54<sup>th</sup> Avenue South intersection experiences excessive queuing along the eastbound and westbound approaches. The eastbound left and westbound left and right queue lengths exceed the available turn bay storage and spill into the though lane. The 34<sup>th</sup> Street South/22<sup>nd</sup> Avenue South intersection also experiences excessive queuing on the eastbound and westbound approaches due to the heavy through and right movements utilizing a shared through-right lane. These queue lengths exceed 500 ft in both the AM and PM peak hours. This impacts business driveways and cross streets on the west leg and the southbound I-275 off-ramp on the east leg. In addition, the northbound left queue extends beyond the available left-turn storage bay, forcing vehicles to spill into the through lanes. The southbound through and right queue lengths may extend as far back as the next signalized intersection at 34<sup>th</sup> Street South/18<sup>th</sup> Avenue South.

The results of the 4-Lane Configuration (Build Alternative) analysis indicate that the 34<sup>th</sup> Street South/54<sup>th</sup> Avenue South intersection experiences excessive queueing along the eastbound and westbound approaches. In the AM peak period, the queue lengths are not significantly different when compared to the 6-Lane Configuration (No Build Alternative). However, in the PM peak period,

the westbound right queue length is reduced significantly, compared to the 6-Lane Configuration (No Build Alternative). This queue is still expected to exceed the allowable storage length and block the southbound I-275 off-ramp. In addition, the southbound left and through queue lengths exceed 1400 ft due to a through lane drop. The 34<sup>th</sup> Street South/22<sup>nd</sup> Avenue South intersection continues to experience excessive queuing on all approaches. It is anticipated that the north and south queue lengths at most of the study intersections will be reduced under the 4-Lane Configuration (Build Alternative).

**Table 5.3. Design Year (2040) 6-Lane Configuration (No Build Alternative) Intersection Queue Length (ft)**

HCM 2010 results are not available for this intersection due to signal phasing scheme. Synchro analysis is reported instead.

## 5.2 Opening Year (2020) Traffic Operational Analysis

The existing year (2018) Synchro models were used as the basis for the opening year (2020) models. A PHF of 0.95 was used for the opening year (2020) Synchro analyses since less variability of congestion within the peak hour is expected as volumes grow. DHT percentages were used for each approach of the signalized intersections along 34th Street South rather than the existing truck percentages. Synchro signal optimization was used to determine optimized signal timing for the study intersections along 34<sup>th</sup> Street South for the 4-Lane Configuration (Build Alternative) only; the existing signal timings were used in the 6-Lane Configuration (No Build Alternative). The existing cycle lengths were maintained to allow for continued coordination along the corridor. The signalized intersection MOEs are discussed in this section.

### 5.2.1 Intersection Delay Analysis

**Table 5.5** and **Table 5.6** shows the opening year (2020) approach and overall intersection control delay and LOS results for the 6-Lane Configuration (No Build Alternative) and 4-Lane Configuration (Build Alternative) respectively, of the signalized intersections within the study area. The delay results were extracted from Synchro and LOS thresholds were taken from the HCM 2010. Synchro delay results by movement can be found in **Appendix F**.

The results of the 6-Lane Configuration (No Build Alternative) analysis indicate that two intersections are not expected to meet acceptable FDOT LOS standards in the AM and PM peak periods. These intersections are 34<sup>th</sup> Street South/54<sup>th</sup> Avenue South and 34<sup>th</sup> Street South/22<sup>nd</sup> Avenue South. These intersections are consistent with the existing year (2018) analysis results. The PM peak period is expected to see the highest incurred delay, with the eastbound and westbound approaches experiencing the highest delays across all intersections.

The results of the 4-Lane Configuration (Build Alternative) analysis indicate that one intersection is not expected to meet acceptable FDOT LOS standards in the AM peak period and two intersections are not expected to meet acceptable FDOT LOS standards in the PM peak period. The opening year (2020) 4-Lane Configuration (Build Alternative) results show no significant worsening, and in some cases an improvement in LOS. The intersections that do not meet acceptable FDOT LOS standards remain the same as the 6-Lane Configuration (No Build Alternative).

As previously noted, a new configuration is currently being considered at 34th Street and 54th Ave S. The new configuration would potentially convert the existing southbound left turn/thru lane into a dedicated southbound left turn lane. This potential change was not included in the analysis for this report. For this report the Build configuration for the southbound approach at the 34th Street and 54th Avenue S intersection was analyzed as one left lane, one shared left-thru, and one right.

**Table 5.5. Opening Year (2020) 6-Lane Configuration (No Build Alternative)  
Intersection Delay (s/veh)**

Intersection	Intersection Approach								Overall Intersection	
	Eastbound		Westbound		Northbound		Southbound

\*HCM 2010 results are not available for this intersection due to signal phasing scheme. Synchro analysis is reported instead.

## 5.2.2 Intersection Queue Analysis

**Table 5.7** and **Table 5.8** show the 95<sup>th</sup> percentile queue length results for the opening year (2020) 6-Lane Configuration (No Build Alternative) and 4-Lane Configuration (Build Alternative), respectively, at the signalized intersections along 34<sup>th</sup> Street South rounded to the nearest 25 ft. Synchro queue results can be found in **Appendix F**. The results of the 6-Lane Configuration (No Build Alternative) analysis indicate that the 34<sup>th</sup> Street South/54<sup>th</sup> Avenue South intersection experiences excessive queueing along the eastbound and westbound approaches. The eastbound left and westbound left and right queue lengths exceed the available turn bay storage and spill into the through lane. The 34<sup>th</sup> Street South/22<sup>nd</sup> Avenue South intersection also experiences excessive queueing on the eastbound and westbound approaches due to the through movements. These queue lengths exceed 500 ft in both AM and PM peak hours. This impacts business driveways and cross streets on the west leg and the southbound I-275 off-ramp on the east leg. In addition, the northbound and southbound left queue extends beyond the available left-turn storage bay, forcing vehicles to spill into the through lanes.

The results of the 4-Lane Configuration (Build Alternative) analysis indicate that the 34<sup>th</sup> Street South/54<sup>th</sup> Avenue South intersection experiences excessive queueing along the eastbound and westbound approaches. In the AM and PM peak period, the eastbound and westbound approaches are reduced compared to the 6-Lane Configuration (No Build Alternative), although the queues for the turn bays continue to exceed the available storage. The northbound and southbound approaches, however, show an increase in the queue length, especially for the southbound left and through movements. The 34<sup>th</sup> Street South/22<sup>nd</sup> Avenue South intersection continues to experience

excessive queuing on all approaches. It is anticipated that the north and south queue lengths at most of the study intersections will be reduced under the 4-Lane Configuration (Build Alternative).

## 6.0 Parallel Corridor Analysis

Generalized Service Volume Tables (GSVT), found in the FDOT Quality/LOS Handbook 2013, were used to perform a parallel corridor capacity analysis. The existing year (2018) and design year (2040) volumes, the Forward Pinellas 2017 AADT counts, and TBRPM, v8.2 future year (2040) AADTs were compared to the LOS D capacities found in the GSVTs to determine if the study corridor and adjacent corridors would exceed capacity. GSVT 1 (**Table 1**) was used on corridors where AADT count data was available, while GSVT 4 (**Table 4**) was used along 34<sup>th</sup> Street South where the developed peak hour two-way DDHVs were used. In addition, GSVT 7 (**Table 7**) was used for all locations to compare the peak hour directional volumes of all facilities. **Table 6.1** provides the capacity checks for 34<sup>th</sup> Street South based on two-way and one-way volumes. The developed volumes were compared to capacities of the 6-Lane Configuration (No Build Alternative) and the 4-Lane Configuration (Build Alternative) in the existing year (2018) and design year (2040). Under both Alternatives, the 34<sup>th</sup> Street South study corridor would operate under capacity for LOS D. It should be noted that the segment between 26<sup>th</sup> Avenue South and 22<sup>nd</sup> Avenue South in the design year (2040) in the PM peak period approaches the capacity of a 4-lane facility, but does not exceed it.

**Table 6.2** provides capacity checks for three nearby adjacent parallel corridors, I-275, 31<sup>st</sup> Street South, and 37<sup>th</sup> Street South. Forward Pinellas 2017 AADT counts were not available for 37<sup>th</sup> Street South, but were available in the TBRPM. In the design year (2040) 31<sup>st</sup> Street South and 37<sup>th</sup> Street South are expected to have additional capacity available for vehicles that may divert away from 34<sup>th</sup> Street South. Under its existing configuration, I-275 is not expected to have additional available capacity in the design year (2040). However, there are plans for this segment of I-275 to be widened under the lane continuity project occurring in southern Pinellas County. This project is intended to increase capacity and would therefore provide additional relief for the 34<sup>th</sup> Street South corridor, although 34<sup>th</sup> Street South is expected to accommodate the design year (2040) demand under either the build or no-build scenario. In addition, if the SMD's activity center is constructed, it is expected that 37<sup>th</sup> Street South would become a more desirable route as it would provide a connection to the western side of the center.

**Table 6.1. 34<sup>th</sup> Street South Capacity Check**

34th Street South Corridor Segment	AM			PM			LOS D Capacity - Peak Hour One-Way		LOS D Capacity - Peak Hour Two-Way	
	NB	SB	Total	NB	SB	Total	3 Lanes	2 Lanes	6 Lanes	4 Lanes
<b>Existing Year (2018)</b>

## 7.0 Public Involvement and Neighborhood Outreach

On April 4, 2019 a public workshop was held at the St. Petersburg College Allstate Center on 34<sup>th</sup> Street South to provide an opportunity for citizen input on the 34<sup>th</sup> Street Lane Repurposing Project. Display boards were set up around the room showing the proposed road design as well as other information about local transit plans, complete street concepts, the Skyway Marina District Plan and the results of the 34<sup>th</sup> Street operations analysis. Staff from FDOT District 7, the City of St. Petersburg, Forward Pinellas, and HDR Inc., as well as representatives of the Skyway Marina District were available to answer questions. A presentation describing the purpose and details of the project was provided by Forward Pinellas staff.

There were 64 people in attendance and 61 of them completed a survey intended to gauge their level of support for the project and to identify their main concerns about the corridor. A summary of the survey results is provided in **Appendix I**. Regarding the proposed improvements, 54 percent supported the lane repurposing, 85 percent supported the wide sidewalks and 80 percent supported the pedestrian activated crosswalks.

Information about this project and a large aerial map of the study corridor and surrounding area was also presented at the FDOT Tampa Bay Next Workshop on October 22, 2018 at the John Hopkins Conference Center in St. Petersburg. Citizens from the area were able to provide comments on the project and leave post it notes on the aerial map indicating locations of concern within or near the study corridor.

Letters of support from City of St. Petersburg Mayor Rick Kriseman, Skyway Marina District Chairman of the Board Jack Dougherty, Eckerd College President Donald Eastman III, and PSTA Chief Executive Officer Brad Miller can also be found in **Appendix I**.

## 8.0 Conceptual Implementation and Funding Plan

Funding for design and construction for proposed lane elimination improvements is included in the FDOT current work program under FPID: 440246-1. The project is programmed for design in FY2020. The FPID number for resurfacing design is 440246-1-32-01. The FPID number for complete streets design is 440246-1-32-02. Additionally, the project is programmed for construction for FY2022. The FPID number for resurfacing construction is 440246-1-52-01. The FPID number for complete streets construction is 440246-1-52-02. The grand total cost for both projects is \$19,332,227 and reflects the overall cost of the resurfacing and complete streets improvements. The costs associated with the lane elimination have been factored into this estimate, and the project is fully funded.

## 9.0 Conclusions

It is recommended that the proposed lane repurposing (Build Alternative) is implemented. The results of the operational analysis show that the 4-Lane Configuration (Build Alternative) operates similarly to the 6-Lane Configuration (No Build Alternative), indicating that eliminating a travel lane in each direction is not expected to adversely affect the operations of 34<sup>th</sup> Street South. This is due to optimized signal timing and right-turn overlaps at the six signalized intersections under the 4-Lane Configuration (Build Alternative) that help counteract the effects of eliminating a lane. The right-turn overlaps can only be implemented under 4-Lane Configuration (Build Alternative), which allows for a right-turn bay along the northbound and southbound approaches. The 4-Lane Configuration (Build Alternative) is expected to operate at LOS E or worse at the 34<sup>th</sup> Street South/54<sup>th</sup> Avenue South and 34<sup>th</sup> Street South/22<sup>nd</sup> Avenue South intersections in the design year (2040); the 6-Lane Configuration (No Build Alternative) is also expected to operate at LOS E or worse at these same intersections. The results of the parallel corridors analysis show that nearby corridors will have additional capacity to divert traffic from 34<sup>th</sup> Street South, although 34<sup>th</sup> Street South is expected to accommodate the design year (2040) demand as a 4-lane facility.

(Initial Checklist - Form 126-A, Methodology  
Checklist – Form 126-B, Initial Notice to Central  
Office – Form 126-C, Final Review and Approval  
Notice to Central Office – Form 126-D)

## **34<sup>th</sup> Street Lane Elimination Checklist Meeting**

**December 6, 2018**

**FDOT District 7, Tampa**

### **Attendees:**

Cheryl Stacks, St. Petersburg Transportation and Parking (via phone)  
Evan Mory, St Petersburg Transportation and Parking (via phone)  
Sandra Gonzalez, FDOT  
Liz Winters, FDOT  
Chad Stewart, FDOT  
Brian Hunter, FDOT  
Ken Spitz, FDOT  
Alex Henry, FDOT  
Peter Hsu, FDOT  
Tim Folsom, Atkins  
Steve Schukraft, HDR  
Bryan St. George, HDR  
Heather Hubbard, HDR  
Sarah Caper, Forward Pinellas  
Al Bartolotta, Forward Pinellas

The purpose of the meeting was to address the lane elimination study requirements identified on FDOT's form 126. This meeting was one of the requirements. The checklist items on the forms (126-A, 126-B and 126-C) must be completed in order for FDOT to initiate the process of re-striping the lanes as part of the scheduled re-surfacing project.

Al brought up the Federal Highway Administration (FHWA) led road safety evaluation conducted in 2012. It involved staff from FDOT's safety office as well as the City of St. Petersburg, FHWA and the MPO. The section of the corridor included in the study extended from 54<sup>th</sup> Avenue South to 38<sup>th</sup> Avenue North. Alex said the recommendations from the study would be considered in the resurfacing project. He added that it is a standard practice to review any previous studies conducted within the limits of a project area. Al mentioned that the 2012 study also prompted the idea of considering a road diet south of 22<sup>nd</sup> Avenue South.

Al provided the group with some background information about the section of 34<sup>th</sup> Street South that traverses the Skyway Marina District and why lane elimination was desired there as well as the long term vision for the corridor. He summarized the most recent stakeholder meeting held in St. Petersburg on November 28. He mentioned one of the outcomes of the meeting was the recommendation of a third re-design option, four lanes with a widened center median. This presents a challenge given that a preferred option must be identified in the 126 forms. It was assumed that option would be the six lane configuration with the outside lanes being re-

purposed for bus/business access (BAT) lanes. The operational feasibility analysis conducted by HDR only evaluated this design scenario and a “no-build” scenario.

FDOT staff indicated that the four lane option is not feasible to accomplish as part of the resurfacing project as it would require re-locating curbs, an expense that is outside the budget limits of the project. However, they did agree it was a viable option to consider as a future improvement. [This topic was discussed again later in the meeting]

Steve pointed out the Skyway community’s interest in creating a main street and stated there is some work to do to reach a consensus on the re-design.

The group reviewed the project schedule. Cheryl confirmed the community workshop would be in late January or early February. FDOT staff needs three to four weeks to review the final lane elimination report. They would need to advertise for the resurfacing design work by early February next year.

In response to comments about sidewalk needs along the corridor, Peter explained that FDOT is currently in “backup mode” in terms of responding to all the requests from local governments for safety improvements.

Cheryl talked about opportunities to elongate existing medians. She identified locations where medians could be modified to provide refuge for crossing pedestrians while not impacting left turn movements. She mentioned the 50<sup>th</sup> Avenue South intersection as one location where the median could be lengthened.

Peter asked whether developers could pay for any pedestrian crossings. Cheryl responded that the City is trying to provide incentives for development projects and has committed \$1 million in local funds for improvements on the corridor. These include trail and signal improvements.

Evan talked about the right-of-way conditions on the corridor. From 38<sup>th</sup> Avenue South to 30<sup>th</sup> Avenue South there is 200 feet of right-of-way. North and south of that there is 100 feet of right-of-way and some right turn lanes are on private property. Liz confirmed that no right-of-way would be purchased for the resurfacing project. Sandra added that FDOT can only install wide sidewalks where the needed right-of-way is available. It was mentioned that the design work will be ready in December, 2019.

Regarding the community workshop, Cheryl said they will need to give the public a way to visualize what the project will look like. There was discussion about whether to show the four lane design option. Ken expressed concern about showing the public something that wasn’t going to happen as a result of the resurfacing project. Tim said that it should only be shown conceptually as a potential long term option. In response to showing the potential costs of this option, Alex indicated they could look at FDOT’s long range estimates (LRE) to provide an idea of the costs involved.

There was some discussion about addressing hurricane evacuation impacts. Heather indicated the operations analysis allowed for the BAT lanes to be used for through traffic. Steve stated that the BAT lanes should be acceptable for evacuation use.

Evan asked if FDOT could provide an answer to the third option with the four lanes and widened median. He conveyed to the group that he doesn't want to string the idea along if it's not going to happen. Chad replied that he isn't comfortable investigating that option. Brian added that he wants to reserve the BAT lanes for future BRT service.

In response to a question about when the BRT service might come to 34<sup>th</sup> Street, Sarah said it depends on when funding would be available. She added that, in the interim or even without BRT, PSTA would pursue express service that would be similar to BRT in terms of headway frequency.

Regarding the second option with the BAT lanes, it was agreed that the lanes could be narrowed to 11 feet. This would allow for the medians to be widened in the future.

There was discussion about landscaping. FDOT staff indicated it would have to be a separate project.

Al posed the question of what could be done to create a main street environment aside from narrowing lanes and installing landscaping. Cheryl responded she would like to see pedestrian crosswalks every four to six blocks. One location for a crosswalk, she noted, would be the 50<sup>th</sup> Avenue South intersection. Chad replied that they would need to see analysis on the crosswalks. Evan noted that he recently observed that count equipment had been installed to collect count data at the intersections. No one knew who the equipment belonged to.

To install the crosswalks, Peter said they need pedestrian counts. He also said that a full signal or a HAWK signal are the only options for traffic control on six lane State roads. Cheryl explained the City has had a higher rate of success with the rapid flashing beacons (RRFB) as opposed to the HAWK signals. She also contended that the HAWK signals don't work well for bikes. Sandra responded that FDOT is seeing higher compliance rates with the HAWK signals, as compared to RRFBs, in Tampa.

Peter said his office will work with Tallahassee on the question as to whether RRFBs can be considered.

It was agreed the stakeholder group would touch base after the holidays regarding the workshop logistics. In addition, the City and Forward Pinellas staff would follow up with FDOT in a couple weeks regarding the graphic renderings and associated materials.

## Methodology Checklist

**This is an illustrative list of items that the District Review Team may require the Applicant to address in a Concept Report, as needed:**

- |   |   |
|---|---|
| <p><input type="checkbox"/> Conceptual design plans (including proposed typical sections) that meet FDOT design standards for all transportation modes</p> <p><input type="checkbox"/> Need for any design variations or exceptions</p> <p><input type="checkbox"/> Size of impact area</p> <p><input checked="" type="checkbox"/> Near- and long-range traffic forecasts with and without the proposed (with changes in travel patterns clearly shown)</p> <p><input checked="" type="checkbox"/> Near- and long-range level of service (LOS) and queuing analysis for intersections and segments in the impact area under the build and no-build scenarios           <ul style="list-style-type: none"> <li>• LOS analyses may be daily or peak hour analyses at the District Review Team's discretion.</li> <li>• The District Review Team and the Applicant should agree on an analysis methodology.</li> </ul> </p> <p><input checked="" type="checkbox"/> Mitigation to address significant and adverse LOS impacts on State roads and the regional transportation system resulting from the lane elimination</p> <p><input checked="" type="checkbox"/> Impact on pedestrian and bicycle infrastructure (e.g., sidewalks, bicycle lanes, and multi-use paths) and connectivity</p> <p><input checked="" type="checkbox"/> Impact on transit routes and transit stops locations (including appropriateness of turn radii and lane widths)</p> <p><input checked="" type="checkbox"/> Impact on parking supply</p> | <p><input checked="" type="checkbox"/> Crash data summary and analysis, which may include identification of high-crash locations (by crash type) and locations on FDOT's 5% lists (i.e., the lists of the 5% of segments and intersections with the highest number of crashes) and estimation of the potential increase or decrease in crashes using Crash Modification Factors (CMFs) from the Highway Safety Manual, CMFs from the FHWA CMF Clearinghouse website, or other appropriate methodologies</p> <p><input checked="" type="checkbox"/> Impact on trucks and designated truck routes (including appropriateness of turn radii and lane widths and possible relocation of designated truck routes)</p> <p><input checked="" type="checkbox"/> Impact on evacuation routes and emergency response</p> <p><input type="checkbox"/> Conceptual funding plan (includes cost estimates and funding sources)</p> <p><input type="checkbox"/> Conceptual implementation plan (including an implementation schedule and a list of the commitments that the applicant will make in support of the lane elimination project)</p> <p><input type="checkbox"/> Existing posted speed and desired posted speed after the lane elimination</p> <p><input type="checkbox"/> The need to add, remove, or modify traffic signals</p> <p><input type="checkbox"/> Impacts on school crossing locations and/or midblock pedestrian crossing locations</p> <p><input type="checkbox"/> Case-specific special considerations to be determined (e.g., railroad crossing improvements)</p> |

**Lane Elimination  
Initial Notice to Central Office**

To: \_\_\_\_\_ From: \_\_\_\_\_ Date: \_\_\_\_\_  
*Systems Management Administrator*                   *District Lane Elimination Coordinator*

The intent of this message is to inform Central Office that District 7 has received a request for lane elimination on a State Highway.

**PROJECT INFORMATION**

State Road: 34th Street South/US Highway 19  
 Project Location: 34th St. S., 22nd Ave S. to 54th Ave S.  
 Roadway ID: \_\_\_\_\_  
 Context Classification: C3C - Suburban Commercial (planning for transition to urban general or urban center)  
 Project Limits (MP): From 22nd Ave S. to 54th Ave S.  
 Applicant: Forward Pinellas  
 Project Description: Elimination of outside general purpose lanes, re-purposing them to bus/business access (BAT) lanes

Proposed Change in Cross Section: From 6 gen. purpose lanes to 4 gen. purpose lanes

SIS       NHS

**ACTIONS AND OUTCOMES TO DATE**

District staff participated in a meeting with Forward Pinellas and City of St. Petersburg representatives on 12/6/18 to formally commence the lane elimination review process. At that meeting, District staff provided an overview of the lane elimination review process and the Applicant shared initial information about the lane elimination project. The District determined the specific review process and analysis methodology for the lane elimination request.

**NEXT STEPS**

The Applicant will submit a Draft Concept Report (containing a proposed typical section) as the lane elimination review process proceeds. If the District reviewers find the Draft Concept Report acceptable, the District will recommend that the Applicant submit a formal Application Package (including the Final Concept Report). If the Application Package is complete and acceptable, the District will approve the lane elimination request with the concurrence of Central Office.

**Concurrences:**

*District Planning and Environmental Administrator*

Date: \_\_\_\_\_

*District Design Engineer*

Date: \_\_\_\_\_

*District Traffic Operations Engineer*

Date: \_\_\_\_\_

## Lane Elimination Final Review and Approval Notice to Central Office

The intent of this message is to inform Central Office that District 7 has received a request for lane elimination on a State Highway.

### **PROJECT INFORMATION**

State Road: US 19

Project Location: Pinellas County

Project Limits (MP): From: 54th Avenue South to 22nd Avenue South

Applicant: Forward Pinellas

Project Description: Repurposing the segment's existing outside lanes to bus-only (BAT) lanes  
The FDM Context Classification is C3C - Suburban Commercial.

---

Project Purpose: To support the delivery of enhanced transit service along the corridor.

Proposed Change in Cross Section: From 6 lanes to 4 lanes

SIS       NHS

### **District Approvals:**

\_\_\_\_\_  
District Design Engineer

Date: \_\_\_\_\_

\_\_\_\_\_  
District Traffic Operations Engineer

Date: \_\_\_\_\_

### **Concurrence:**

\_\_\_\_\_

## Appendix B

### Skyway Marina District Plan

# INTRODUCTION

This Plan represents a collective vision for the Skyway Marina District, located on 34<sup>th</sup> Street South between 30<sup>th</sup> and 54<sup>th</sup> Avenues, that will capitalize on its strengths and lead the City to have a South St. Petersburg mixed use center. The community has had a longtime desire to have an activity center in the far southern Pinellas County area as their first option for shopping and dining.

This is an ambitious plan made possible by a high level of agreement behind its recommendations. The dedication of the Steering Committee to meet throughout the planning process was the driving force behind shaping a collective vision. The open nature of the Steering Committee allowed everyone to participate and provide input on the future of the corridor. More than 50 persons representing various groups regularly attended meetings and further reinforced the importance of the Skyway Marina District Plan.

*The Skyway Marina District is in a unique position to capitalize on the waterfront, transportation access, tourism and academic institutions - assets rarely found together in the Tampa Bay Region.*

The plan has five strategies: Transportation, Streetscape, Land Use & Site Design, Economic Development and Marketing and Promotions. The purpose of the plan is to:

- 1) Improve the retail experience,**
- 2) Create more redevelopment opportunities; and**
- 3) Increase the profits of businesses.**

# THE VISION

Envision the Skyway Marina District as the primary activity center in beautiful southern St. Petersburg with a mix of shops, restaurants, offices, residences and neighborhood service businesses. The District is home to a variety of sit down restaurants, apparel shops, home and outdoor stores, and boutiques. Tourists staying on South Pinellas beaches frequently visit the District which is minutes away. Trolley service runs regularly, better connecting the southern St. Petersburg area. Enhanced pedestrian and bike connections provide safe alternative access for surrounding neighborhoods. The District's public art, interspersed throughout the corridor, provides a unique and memorable enhancement to the streetscape.

New residents within the District enjoy walking to shop, dine, and enjoy outdoor amenities to go with their breathtaking views of the water, downtown St. Petersburg and Sunshine Skyway Bridge. Additional offices provide a daytime vibrancy to the area and additional employment opportunities for the community. New development is environmentally sensitive and sustainable. The image and marketing of the District is guided by a strong business association that enhances the business climate.

The following is an overall vision statement based on the each strategy's vision statement adopted by the Steering Committee:

*The District will have various mobility options and a more attractive appearance. Unique businesses in the District along with mixed use vertical development, and marine and marine-related recreational businesses will be prominent. A strong business organization marketing the District, promoting a positive brand and creating a better business atmosphere will improve economic growth.*

# Strategy Vision Statements

## Transportation

*The District should embrace all viable mobility options that are reliable, affordable and safe.*

*Connectivity and walkability should be a high priority and an important consideration throughout the District.*

## Streetscape

*An attractive appearance should be created within the District that establishes a cohesive image, unique identity and safe environment, and includes public art and Florida friendly landscaping.*

## Land Use & Site Design

*Mixed use vertical development with ground floor retail and integrated parking should be encouraged. Unique businesses and design are desired.*

*Sites should provide multi-modal amenities, off-site connectivity and native landscaping with signage reflecting the character of the district.*

*Best environmental practices should be encouraged in the construction of all development.*

## Economic Development

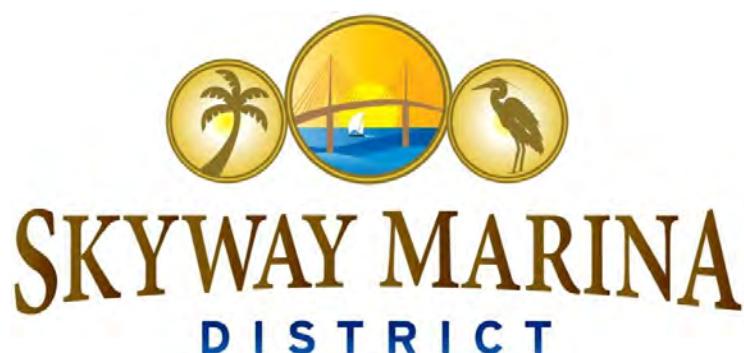

*Additional retail, restaurants and offices are desired in the District to provide additional shopping, dining and employment.*

*The location of the District supports a special emphasis on marine related development and recreational activities.*

## Marketing & Promotions

*A positive and unified brand should be created for the District that is easily identifiable and marketed.*

*A strong business organization is desired to focus on activities that improve the business climate and increase customers patronizing the District.*

## Appendix C

### Traffic Count Data

**SUMMARY OF TURNING MOVEMENT COUNTS**

General Information								Intersection Diagram									
Analyst/Observer:	Ritter / Stone																
Agency or Company:	City of St. Petersburg																
Date Performed:	Tuesday, April 3, 2018																
Analysis Time Period:	7AM - 9AM and 4PM - 6PM																
Site Information																	
City:	St. Petersburg																
County:	Pinellas																
Weather:	Clear and warm																
Remarks:																	
VEHICLE MOVEMENTS

#### Intersection Summary

Area Type: Other

Cycle Length: 130

Actuated Cycle Length: 130

Offset: 71 (55%), Referenced to phase 2:WBT, Start of Green

Natural Cycle: 85

Control Type: Actuated-Coordinated

Maximum v/c Ratio: 0.74

Intersection Signal Delay: 39.4

Intersection LOS: D

Intersection Capacity Utilization 69.1%

ICU Level of Service C

Analysis Period (min) 15

# 95th percentile volume exceeds capacity, queue may be longer.

Queue shown is maximum after two cycles.

Splits and Phases: 1: 54th Avenue & 34th Street

Lanes, Volumes, Timings  
2: 34th Street & 46th Avenue

#### Intersection Summary

Area Type: CBD

Cycle Length: 130

Actuated Cycle Length: 130

Offset: 106 (82%), Referenced to phase 2:SBT and 6:NBT, Start of Green

Natural Cycle: 120

Control Type: Actuated-Coordinated

Maximum v/c Ratio: 1.39

Intersection Signal Delay: 63.4

Intersection LOS: E

Intersection Capacity Utilization 89.0%

ICU Level of Service E

Analysis Period (min) 15

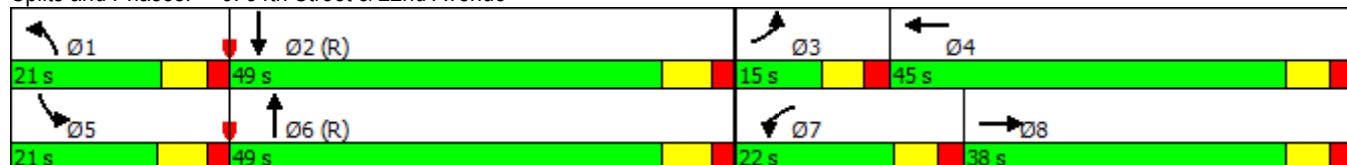

~ Volume exceeds capacity, queue is theoretically infinite.

Queue shown is maximum after two cycles.

# 95th percentile volume exceeds capacity, queue may be longer.

Queue shown is maximum after two cycles.

#### Intersection Summary

Area Type: Other

Cycle Length: 140

Actuated Cycle Length: 140

Offset: 72 (51%), Referenced to phase 2:SBT and 6:NBT, Start of Green

Natural Cycle: 80

Control Type: Actuated-Coordinated

Maximum v/c Ratio: 0.81

Intersection Signal Delay: 23.0

Intersection LOS: C

Intersection Capacity Utilization 72.1%

ICU Level of Service C

Analysis Period (min) 15

# 95th percentile volume exceeds capacity, queue may be longer.

Queue shown is maximum after two cycles.

m Volume for 95th percentile queue is metered by upstream signal.

Splits and Phases: 3: 34th Street & 38th Avenue

#### Intersection Summary

Area Type: CBD

Cycle Length: 140

Actuated Cycle Length: 140

Offset: 20 (14%), Referenced to phase 2:SBT and 6:NBT, Start of Green

Natural Cycle: 110

Control Type: Actuated-Coordinated

Maximum v/c Ratio: 1.13

Intersection Signal Delay: 61.6

Intersection LOS: E

Intersection Capacity Utilization 92.6%

ICU Level of Service F

Analysis Period (min) 15

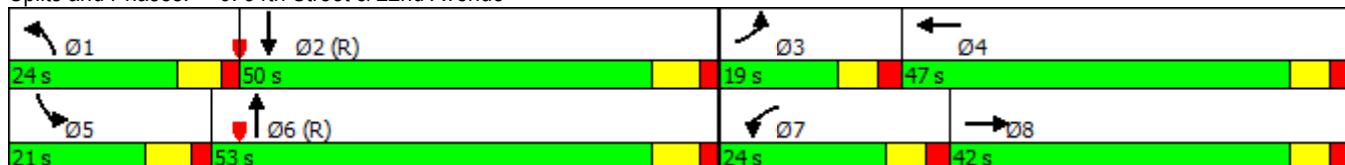

~ Volume exceeds capacity, queue is theoretically infinite.

Queue shown is maximum after two cycles.

# 95th percentile volume exceeds capacity, queue may be longer.

Queue shown is maximum after two cycles.

Splits and Phases: 6: 34th Street & 22nd Avenue

Design Year (2040) 6-Lane Configuration (No Build Alternative) Analysis

#### Intersection Summary

Area Type: Other

Cycle Length: 130

Actuated Cycle Length: 130

Offset: 57 (44%), Referenced to phase 2:SBT and 6:NBT, Start of Green

Natural Cycle: 110

Control Type: Actuated-Coordinated

Maximum v/c Ratio: 0.57

Intersection Signal Delay: 26.1

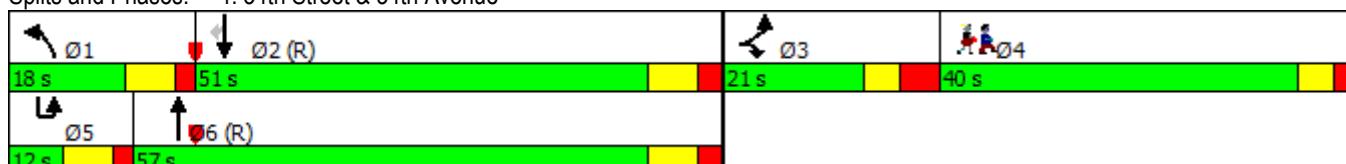

Intersection LOS: C

Intersection Capacity Utilization 57.1%

ICU Level of Service B

Analysis Period (min) 15

Splits and Phases: 4: 34th Street & 34th Avenue

Lanes, Volumes, Timings  
5: 34th Street & 26th Avenue

#### Intersection Summary

Area Type: Other

Cycle Length: 140

Actuated Cycle Length: 140

Offset: 12 (9%), Referenced to phase 2:WBT, Start of Green

Natural Cycle: 145

Control Type: Actuated-Coordinated

Maximum v/c Ratio: 1.04

Intersection Signal Delay: 53.3

Intersection LOS: D

Intersection Capacity Utilization 92.3%

ICU Level of Service F

Analysis Period (min) 15

~ Volume exceeds capacity, queue is theoretically infinite.

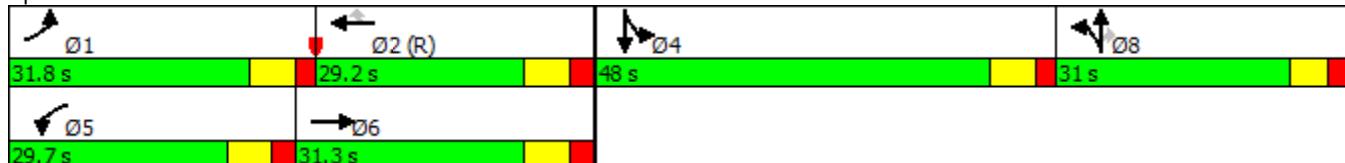

Queue shown is maximum after two cycles.

# 95th percentile volume exceeds capacity, queue may be longer.

Queue shown is maximum after two cycles.

dl Defacto Left Lane. Recode with 1 though lane as a left lane.

Splits and Phases: 1: 54th Avenue & 34th Street

Lanes, Volumes, Timings  
2: 34th Street & 46th Avenue

#### Intersection Summary

Area Type: Other

Cycle Length: 140

Actuated Cycle Length: 140

Offset: 138 (99%), Referenced to phase 2:SBT and 6:NBT, Start of Green

Natural Cycle: 60

Control Type: Actuated-Coordinated

Maximum v/c Ratio: 0.98

Intersection Signal Delay: 60.1

Intersection LOS: E

Intersection Capacity Utilization 78.4%

ICU Level of Service D

Analysis Period (min) 15

# 95th percentile volume exceeds capacity, queue may be longer.

Queue shown is maximum after two cycles.

m Volume for 95th percentile queue is metered by upstream signal.

Splits and Phases: 5: 34th Street & 26th Avenue

Lanes, Volumes, Timings  
6: 34th Street & 22nd Avenue

#### Intersection Summary

Area Type: Other

Cycle Length: 130

Actuated Cycle Length: 130

Offset: 64 (49%), Referenced to phase 2:WBT and 6:EBT, Start of Green

Natural Cycle: 85

Control Type: Actuated-Coordinated

Maximum v/c Ratio: 0.73

Intersection Signal Delay: 32.2

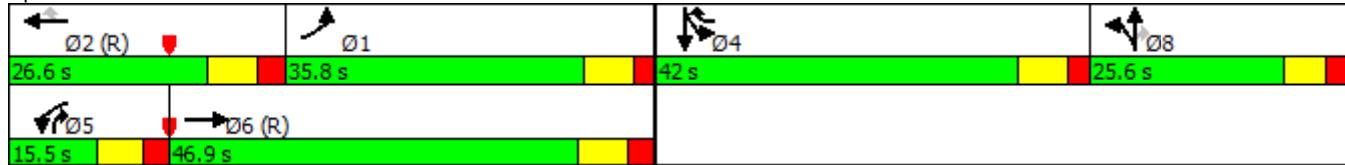

Intersection LOS: C

Intersection Capacity Utilization 73.2%

ICU Level of Service D

Analysis Period (min) 15

#### Splits and Phases: 1: 54th Avenue & 34th Street

#### Intersection Summary

Area Type: Other

Cycle Length: 130

Actuated Cycle Length: 130

Offset: 92 (71%), Referenced to phase 2:SBTL and 6:NBTL, Start of Green

Natural Cycle: 40

Control Type: Actuated-Coordinated

Maximum v/c Ratio: 0.50

Intersection Signal Delay: 7.3

Intersection LOS: A

Intersection Capacity Utilization 57.3%

ICU Level of Service B

Analysis Period (min) 15

m Volume for 95th percentile queue is metered by upstream signal.

Splits and Phases: 2: 34th Street & 46th Avenue

Lanes, Volumes, Timings  
3: 34th Street & 38th Avenue

#### Intersection Summary

Area Type: Other

Cycle Length: 130

Actuated Cycle Length: 130

Offset: 102 (78%), Referenced to phase 2:SBT and 6:NBT, Start of Green

Natural Cycle: 60

Control Type: Actuated-Coordinated

Maximum v/c Ratio: 0.72

Intersection Signal Delay: 17.7

Intersection LOS: B

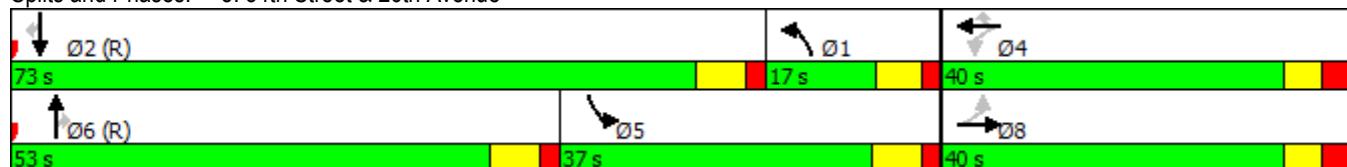

Intersection Capacity Utilization 77.8%

ICU Level of Service D

Analysis Period (min) 15

m Volume for 95th percentile queue is metered by upstream signal.

Splits and Phases: 5: 34th Street & 26th Avenue

Lanes, Volumes, Timings  
6: 34th Street & 22nd Avenue

#### Intersection Summary

Area Type: Other

Cycle Length: 140

Actuated Cycle Length: 140

Offset: 24 (17%), Referenced to phase 2:SBTL and 6:NBTL, Start of Green

Natural Cycle: 80

Control Type: Actuated-Coordinated

Maximum v/c Ratio: 0.71

Intersection Signal Delay: 6.5

Intersection LOS: A

Intersection Capacity Utilization 80.1%

ICU Level of Service D

Analysis Period (min) 15

m Volume for 95th percentile queue is metered by upstream signal.

Splits and Phases: 2: 34th Street & 46th Avenue

Lanes, Volumes, Timings  
3: 34th Street & 38th Avenue

#### Intersection Summary

Area Type: Other

Cycle Length: 140

Actuated Cycle Length: 140

Offset: 98 (70%), Referenced to phase 2:SBT and 6:NBT, Start of Green

Natural Cycle: 80

Control Type: Actuated-Coordinated

Maximum v/c Ratio: 0.77

Intersection Signal Delay: 20.2

Intersection LOS: C

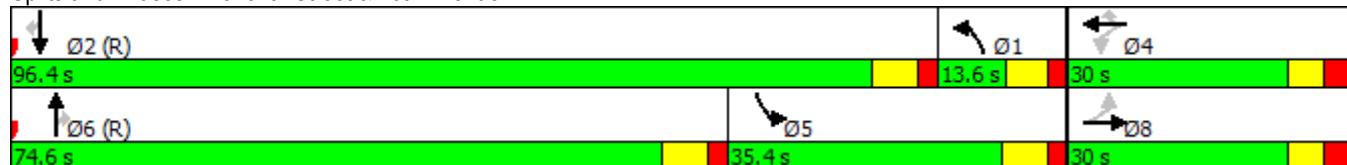

Intersection Capacity Utilization 92.3%

ICU Level of Service F

Analysis Period (min) 15

m Volume for 95th percentile queue is metered by upstream signal.

Splits and Phases: 5: 34th Street & 26th Avenue

Lanes, Volumes, Timings  
6: 34th Street & 22nd Avenue

#### Intersection Summary

Area Type: CBD

Cycle Length: 140

Actuated Cycle Length: 140

Offset: 128 (91%), Referenced to phase 2:SBT and 6:NBT, Start of Green

Natural Cycle: 150

Control Type: Actuated-Coordinated

Maximum v/c Ratio: 1.64

Intersection Signal Delay: 103.4

Intersection LOS: F

Intersection Capacity Utilization 111.3%

ICU Level of Service H

Analysis Period (min) 15

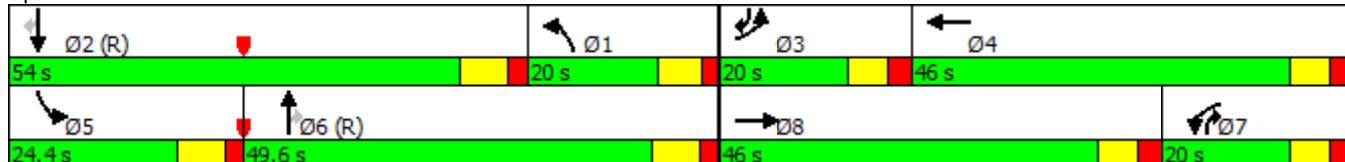

~ Volume exceeds capacity, queue is theoretically infinite.

Queue shown is maximum after two cycles.

# 95th percentile volume exceeds capacity, queue may be longer.

Queue shown is maximum after two cycles.

#### Splits and Phases: 6: 34th Street & 22nd Avenue

## Opening Year (2020) 6-Lane Configuration (No Build Alternative) Analysis

---

User approved volume balancing among the lanes for turning movement.

#### Intersection Summary

Area Type: Other

Cycle Length: 130

Actuated Cycle Length: 130

Offset: 71 (55%), Referenced to phase 2:WBT, Start of Green

Natural Cycle: 85

Control Type: Actuated-Coordinated

Maximum v/c Ratio: 0.72

Intersection Signal Delay: 38.4

Intersection LOS: D

Intersection Capacity Utilization 69.4%

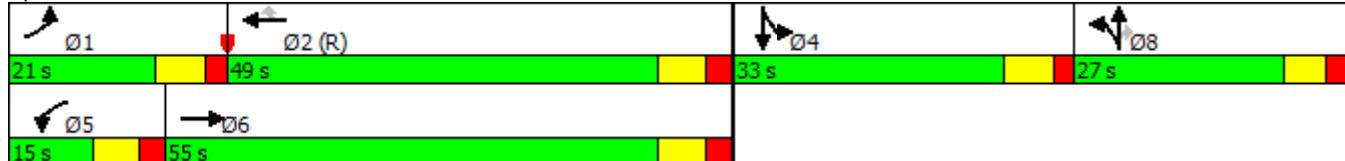

ICU Level of Service C

Analysis Period (min) 15

# 95th percentile volume exceeds capacity, queue may be longer.

Queue shown is maximum after two cycles.

Splits and Phases: 1: 54th Avenue & 34th Street

Lanes, Volumes, Timings  
2: 34th Street & 46th Avenue

Intersection Summary

Area Type: Other

Cycle Length: 140

Actuated Cycle Length: 140

Offset: 12 (9%), Referenced to phase 2:WBT, Start of Green

Natural Cycle: 95

Control Type: Actuated-Coordinated

Maximum v/c Ratio: 2.07

Intersection Signal Delay: 98.0

Intersection LOS: F

Intersection Capacity Utilization 86.2%

ICU Level of Service E

Analysis Period (min) 15

~ Volume exceeds capacity, queue is theoretically infinite.

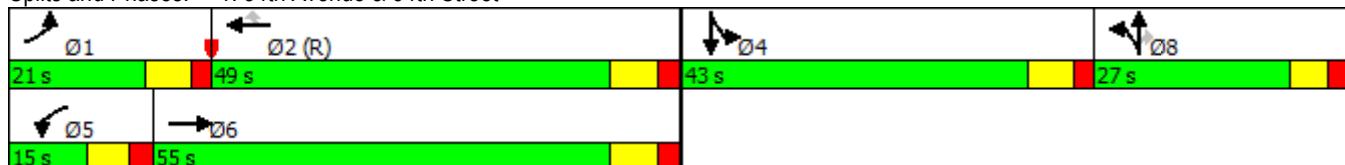

Queue shown is maximum after two cycles.

# 95th percentile volume exceeds capacity, queue may be longer.

Queue shown is maximum after two cycles.

dl Defacto Left Lane. Recode with 1 though lane as a left lane.

Splits and Phases: 1: 54th Avenue & 34th Street

Lanes, Volumes, Timings  
2: 34th Street & 46th Avenue

#### Intersection Summary

Area Type: Other

Cycle Length: 140

Actuated Cycle Length: 140

Offset: 92 (66%), Referenced to phase 2:SBT and 6:NBT, Start of Green

Natural Cycle: 150

Control Type: Actuated-Coordinated

Maximum v/c Ratio: 0.76

Intersection Signal Delay: 23.7

Intersection LOS: C

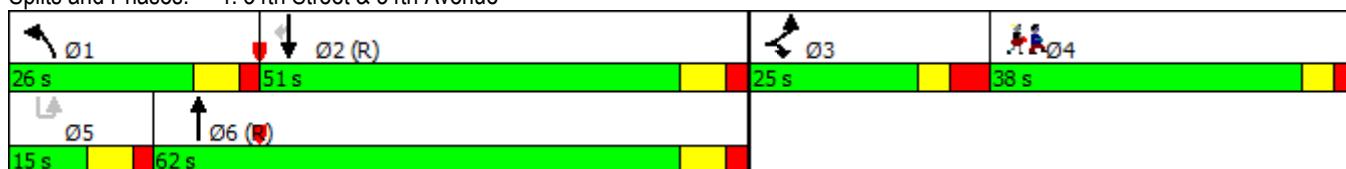

Intersection Capacity Utilization 71.3%

ICU Level of Service C

Analysis Period (min) 15

m Volume for 95th percentile queue is metered by upstream signal.

Splits and Phases: 4: 34th Street & 34th Avenue

Lanes, Volumes, Timings  
5: 34th Street & 26th Avenue

#### Intersection Summary

Area Type: CBD

Cycle Length: 140

Actuated Cycle Length: 140

Offset: 20 (14%), Referenced to phase 2:SBT and 6:NBT, Start of Green

Natural Cycle: 120

Control Type: Actuated-Coordinated

Maximum v/c Ratio: 1.13

Intersection Signal Delay: 63.1

Intersection LOS: E

Intersection Capacity Utilization 93.6%

ICU Level of Service F

Analysis Period (min) 15

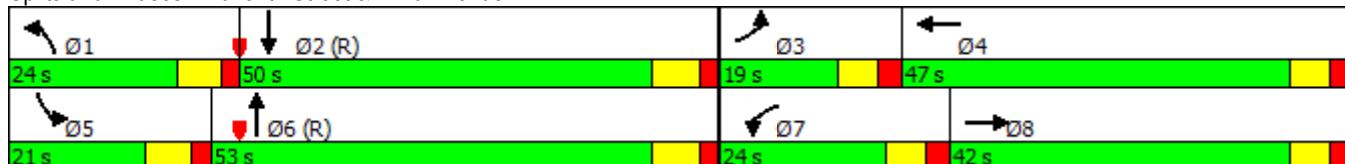

~ Volume exceeds capacity, queue is theoretically infinite.

Queue shown is maximum after two cycles.

# 95th percentile volume exceeds capacity, queue may be longer.

Queue shown is maximum after two cycles.

Splits and Phases: 6: 34th Street & 22nd Avenue

Opening Year (2020) 4-Lane Configuration (Build Alternative) Analysis

---

User approved volume balancing among the lanes for turning movement.

\* HCM 2010 computational engine requires equal clearance times for the phases crossing the barrier.

Intersection Summary

Area Type: Other

Cycle Length: 130

Actuated Cycle Length: 130

Offset: 64 (49%), Referenced to phase 2:WBT and 6:EBT, Start of Green

Natural Cycle: 85

Control Type: Actuated-Coordinated

Maximum v/c Ratio: 0.69

Intersection Signal Delay: 30.6

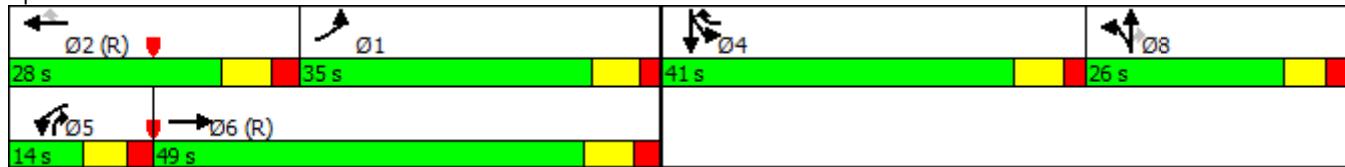

Intersection LOS: C

Intersection Capacity Utilization 69.0%

ICU Level of Service C

Analysis Period (min) 15

Splits and Phases: 1: 54th Avenue & 34th Street

Lanes, Volumes, Timings  
2: 34th Street & 46th Avenue

#### Intersection Summary

Area Type: Other

Cycle Length: 130

Actuated Cycle Length: 130

Offset: 92 (71%), Referenced to phase 2:SBTL and 6:NBTL, Start of Green

Natural Cycle: 40

Control Type: Actuated-Coordinated

Maximum v/c Ratio: 0.46

Intersection Signal Delay: 6.9

Intersection LOS: A

Intersection Capacity Utilization 55.9%

ICU Level of Service B

Analysis Period (min) 15

m Volume for 95th percentile queue is metered by upstream signal.

Splits and Phases: 2: 34th Street & 46th Avenue

Lanes, Volumes, Timings  
3: 34th Street & 38th Avenue

07/09/2018

#### Intersection Summary

Area Type: CBD

Cycle Length: 130

Actuated Cycle Length: 130

Offset: 128 (98%), Referenced to phase 2:SBT and 6:NBT, Start of Green

Natural Cycle: 140

Control Type: Actuated-Coordinated

Maximum v/c Ratio: 1.24

Intersection Signal Delay: 66.1

Intersection LOS: E

Intersection Capacity Utilization 97.2%

ICU Level of Service F

Analysis Period (min) 15

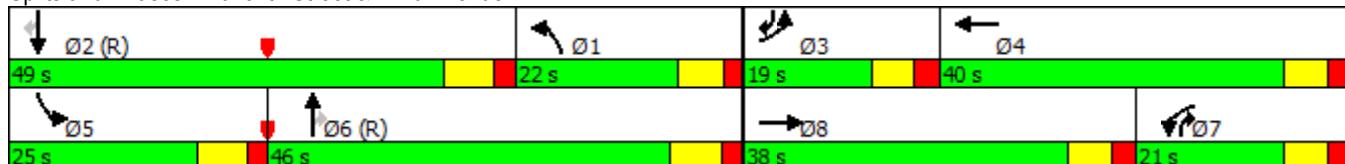

~ Volume exceeds capacity, queue is theoretically infinite.

Queue shown is maximum after two cycles.

# 95th percentile volume exceeds capacity, queue may be longer.

Queue shown is maximum after two cycles.

Splits and Phases: 6: 34th Street & 22nd Avenue

Lanes, Volumes, Timings  
1: 54th Avenue & 34th Street

#### Intersection Summary

Area Type: Other

Cycle Length: 140

Actuated Cycle Length: 140

Offset: 24 (17%), Referenced to phase 2:SBTL and 6:NBTL, Start of Green

Natural Cycle: 60

Control Type: Actuated-Coordinated

Maximum v/c Ratio: 0.66

Intersection Signal Delay: 5.9

Intersection LOS: A

Intersection Capacity Utilization 75.2%

ICU Level of Service D

Analysis Period (min) 15

m Volume for 95th percentile queue is metered by upstream signal.

Splits and Phases: 2: 34th Street & 46th Avenue

Lanes, Volumes, Timings  
3: 34th Street & 38th Avenue

#### Intersection Summary

Area Type: Other

Cycle Length: 140

Actuated Cycle Length: 140

Offset: 24 (17%), Referenced to phase 2:SBT and 6:NBT, Start of Green

Natural Cycle: 150

Control Type: Actuated-Coordinated

Maximum v/c Ratio: 1.27

Intersection Signal Delay: 24.0

Intersection LOS: C

Intersection Capacity Utilization 86.0%

ICU Level of Service E

Analysis Period (min) 15

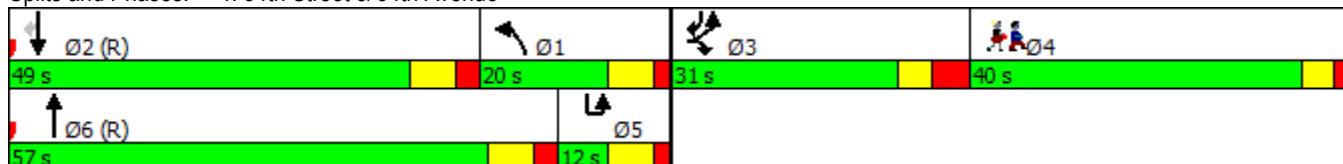

~ Volume exceeds capacity, queue is theoretically infinite.

Queue shown is maximum after two cycles.

# 95th percentile volume exceeds capacity, queue may be longer.

Queue shown is maximum after two cycles.

### Public Involvement Documents

OFFICE OF THE MAYOR

CITY OF ST. PETERSBURG

RICK KRISEMAN, MAYOR

June 5, 2019

Mr. David Eggers, Chair  
Forward Pinellas  
310 Court Street  
Clearwater, FL 33756

Re: 34<sup>th</sup> Street South Pending Resurfacing and lane Re-purposing Project

Dear Mr. Eggers:

I would like to thank Forward Pinellas for your leadership and vision as it relates to US 19/34<sup>th</sup> Street as one of three designated Spotlight Emphasis Areas. The advancement of the Skyway Marina District located along 34<sup>th</sup> Street has been, and continues to be, one of my top economic development priorities. Our vision for the corridor is clearly aligned - and the realization of our mutual goals is already beginning to come together. The agenda item scheduled for your June 12<sup>th</sup> Board meeting will be another positive step towards achieving more success.

Just over five years ago today, the City's Skyway Marina District Plan was approved. Two top goals of the Skyway Marina District Plan's Transportation Element are to improve the safety of the overall transportation system and improve the transit system. A Plan strategy to pursue those goals was exploration of a dedicated bus lane. In addition to providing more reliable transit service upon completion of the project, the City aims to continue work with Forward Pinellas, Pinellas County, PSTA, FDOT and other agencies as necessary to improve transit service in South St. Petersburg and particularly on 34<sup>th</sup> Street. We see tremendous opportunity for 34<sup>th</sup> Street to serve as a premium transit service corridor for increased efficiency in the immediate term and then hope to see more frequent service as well as Express Bus and BRT to link up with the Central Avenue Corridor BRT and Regional BRT service in the future.

The concept developed as a part of the 34<sup>th</sup> Street Lane Repurposing analysis to provide a Business Access and Transit Lane along with additional landscaped medians, wider sidewalks, new pedestrian crossings at mid-block locations and pedestrian improvements at signalized intersections is the result of extensive positive coordination between agencies and public engagement. We especially appreciate how receptive and collaborative FDOT has been through this process in being responsive to the desires of the City and community.

The City of St. Petersburg supports Forward Pinellas and the FDOT in moving forward with the concept plan as presented and looks forward to working with all agencies and the community to finalize design.

Thank you, your fellow Board Members, Executive Director Whit Blanton, and agency staff for your leadership, vision, and partnership on this and other improvement projects in St. Petersburg, Pinellas County and the region.

Sincerely,

A handwritten signature in blue ink, appearing to read "Rick Kriseman".

Mayor Rick Kriseman

## Skyway Marina District

4801 37th St S, St. Petersburg, FL 33711

Phone: (727) 466-7173

director@skywaymarina.com

April 30, 2019

Evan Mory  
Director of Transportation & Parking Management  
One 4th St. N.  
St. Petersburg, FL 33711

Dear Evan:

The Board of Directors of the Skyway Marina District has reviewed the proposed modifications to South 34th Street (Highway 19) in the area from 22nd Avenue South to 54th Avenue South as developed by FDOT, Pinellas Forward and the City of St. Petersburg.

The Board agrees this approach is a positive step forward for the District that:

- Recognizes the volume of traffic (as measured by a Forward Pinellas traffic survey) does not justify 3 lanes for vehicular traffic in each direction,
- Improves public transportation by eliminating an outside vehicular traffic lane in each direction and repurposing these lanes for bus travel and right turn access to businesses,
- Adds wide sidewalks on both sides of the roadway for both people biking and walking thereby eliminating the need for bicycle lanes on the roadway,
- Improves pedestrian safety by adding new mid-block crosswalks strategically placed between existing traffic signals with Rectangular Rapid Flash Beacons and landscaping that provides space for pedestrian refuge,
- Improves safety for people driving vehicles, people walking, and people biking by reducing operating speeds on the corridor,
- Retains the left turn lane median carve outs in the median to store vehicles out of the traffic lane as they wait for an opportunity to turn left.

Notwithstanding the Board's agreement with the current proposal, the Board anticipates the City and Forward Pinellas will, in time, design further modifications to the roadway and right-of-way to encourage a Town Center-type development. This might include narrower lanes and the addition of a 10 to 12-foot median with landscaping and lighting.

The Board looks forward to participating with the City, Forward Pinellas and Florida Department of Transportation in planning the future infrastructure needs for the Skyway Marina District.

Sincerely,  
**SKYWAY MARINA DISTRICT**

Jack Dougherty,  
Chairman of the Board of Directors

Cc: Honorable Rick Kriseman, Mayor, City of St. Petersburg  
Members of St. Petersburg City Council

# ECKERD COLLEGE

OFFICE OF THE PRESIDENT

April 29, 2019

The Honorable Rick Kriseman  
Mayor of the City of St. Petersburg  
175 5th Street North  
St. Petersburg, FL 33701

Dear Mayor Kriseman and Members of the St. Petersburg City Council:

The Eckerd College community has been closely following and supporting the conversation on transforming the 34<sup>th</sup> Street South corridor in the area from 22<sup>nd</sup> Avenue South to 54<sup>th</sup> Avenue South as developed by FDOT, Forward Pinellas and the City of St. Petersburg. As the City continues to experience a period of redevelopment, this area remains a largely blighted corridor where we currently find ourselves celebrating the arrival of a new gas station and fast food chain upgrades. We hear of mixed-used projects on the horizon and eagerly look forward to signs of construction.

Situated minutes from downtown and some of the best beaches in the world, surrounded by excellent neighborhoods, home to one of the State's most unique and protected marinas, we believe this corridor can be one of the great future nodes of urban expansion for the City if there is a concerted effort to bring that into being. With ample right-of-way for bus rapid transit coupled with creative re-shaping of the roadway to become a boulevard that will pull new urban development to the street, we believe this area can provide an answer to the City's chronic shortage of affordable and workforce housing as well as a vibrant shopping and entertainment district.

While we would like for FDOT, Forward Pinellas, the County and City to reach further towards this goal as soon as possible, we are supportive of the current FDOT proposal as a positive step forward for the corridor in that it:

- Recognizes the volume of traffic (as measured by a Forward Pinellas traffic survey) does not justify three lanes for vehicular traffic in each direction
- Improves vehicle and pedestrian safety by reducing the speed limit on the corridor from 45 mph to 35 mph
- Improves public transportation by eliminating an outside vehicular traffic lane in each direction and repurposing these lanes for bus travel and right turn access to businesses
- Adds wide sidewalks on both sides of the roadway to eliminate the need for bicycle lanes on the roadway

- Improves pedestrian safety by adding mid-block crosswalks with Rectangular Rapid Flash Beacons and landscaping that provide space for pedestrian refuge
- Retains the left turn lane median carve outs in the median to store vehicles out of the traffic lane as they wait for an opportunity to turn left

Consistent with the Skyway Marina District, the College is hopeful the City and Forward Pinellas will, in time, invest in further modifications to the roadway and right-of-way to encourage a town center-type development that includes the addition of a 10- to 12-foot median with landscaping and lighting.

The benefits of such an imaginative revitalization of this area that borders our campus will provide enormous quality-of-life to our students, lifelong learners, faculty, and staff and substantial economic benefits to the entire community and the City of St. Petersburg. We are eager to embrace thoughtful, well-studied plans that revitalize and transform this area while considering any adverse impacts to the nearby residential areas, and we look forward to future community conversations about these changes. Please contact me with questions or concerns.

Respectfully,

Donald R. Eastman III  
President

Notice to Adjacent Properties - Feb 2019

February 22, 2019

**Re: Public Open House for the Proposed Lane Elimination/Repurposing on 34<sup>th</sup> Street South from 54<sup>th</sup> Avenue South to 22<sup>nd</sup> Avenue South**

The City of St. Petersburg, in conjunction with Forward Pinellas and the Florida Department of Transportation (FDOT) have initiated a study to determine whether a motor vehicle lane on 34<sup>th</sup> Street South from 54<sup>th</sup> Avenue South to 22<sup>nd</sup> Avenue could be repurposed as a semi-dedicated bus lane. A semi-dedicated lane would allow buses and emergency vehicles to use the lane as a through lane while allowing motorists to use the lane to turn at intersections and at business/residential driveways. The study follows on the recommendations in the adopted Skyway Marina District Plan to consider such a designation. It is being considered at this time so that proposed changes for the roadway configuration can be incorporated into FDOT's upcoming project to resurface the roadway and make improvements to the sidewalks along 34<sup>th</sup> Street South, which is expected to be included in the FDOT Fiscal Year 2021 work program.

We'd like to invite you to a Public Open House on Monday, March 4, 2019 at 6pm at the SPC Allstate Center located at 3200 34th Street South to learn more about the study and proposed changes to the roadway configuration. Representatives from the City, FDOT, Forward Pinellas, and the Pinellas Suncoast Transit Authority will be in attendance to answer any questions and gather feedback about the study and proposed changes.

If you have any questions in advance of the meeting, please feel free to contact Cheryl Stacks, Transportation Manager, at [Cheryl.Stacks@stpete.org](mailto:Cheryl.Stacks@stpete.org) or 892-5328.

In accordance with the Americans with Disabilities Act and Florida Law, it is the policy of the City of St. Petersburg to offer its public programs, services and meetings in a manner that is readily accessible to everyone, including individuals with disabilities. If you are a person with a disability and need an accommodation, please contact the ADA Coordinator, Lendel Bright at (727) 893-7229, E-mail: [lendel.bright@stpete.org](mailto:lendel.bright@stpete.org), Fax: 727-551-3247, TDD/TTY -727-892-5259, OR Florida Relay Network-711, at least three days in advance of the event.

We hope you'll join us on Monday, March 4 at the Public Open House.

Sincerely,

A handwritten signature in blue ink that reads "Evan Mory".

Evan Mory, Director  
Transportation and Parking Management

Project Website: <http://forwardpinellas.org/projects/34th-street-lane-repurposing-study/>

The screenshot shows a Microsoft Edge browser window displaying the Forward Pinellas website. The title bar reads "Forward Pinellas | 34th". The address bar shows the URL "forwardpinellas.org/projects/34th-street". The website header includes the Forward Pinellas logo, navigation links for "ABOUT US", "THE WAY YOU MOVE", "BUILDING YOUR FUTURE", "GET INVOLVED", "AGENDAS", and "Public Hearings | Document Portal | Agendas | Blog | Calendar | Contact Us". A search bar is also present. The main content area features a large image of several bicycles parked in a row. Below the image, the section title "34th Street Lane Repurposing Project" is displayed. A paragraph of text describes the project's purpose and scope, mentioning collaboration with the Florida Department of Transportation (FDOT), City of St. Petersburg, and Skyway Marina District. It details the resurfacing project, sidewalk construction, and improvements for pedestrians, cyclists, and motorists. A "Project Contact" section provides information for Al Bartolotta, including his email (albartolotta@forwardpinellas.org) and phone number (727-464-5641). At the bottom left, there are links for "Reports" (34th Street Lane Elimination Study, 34th Street Re-purposing Project, April 4, 2019 Public Workshop Exhibits) and "Presentations". On the right side, a map highlights the project location along 34th Street between 22nd Avenue South and 54th Avenue South, with a red box indicating the Skyway Marina District. A legend identifies the yellow line as the "Project Location" and the red box as the "Skyway Marina District".

Details

APRIL 4, 6 PM  
ST PETERSBURG COLLEGE  
ALLSTATE CAMPUS, DESOTO ROOM  
3200 34TH STREET SOUTH

You are invited to attend a public meeting and open house to learn about and provide comments on proposed road design concepts to re-purpose the outside lanes of 34th Street South from 22nd Avenue South to 54th Avenue South. The concepts call for the outside lanes to be re-purposed for bus use and business access. This would be implemented as part of a resurfacing project scheduled for construction in 2022.

The resurfacing project would also include the construction of six- to 10-foot

## 34th Street Lane Re-purposing Workshop, April 4, 2019 - Survey Results

### **1. What is your home zip code?**

33711	29% (Skyway Marina District)
33712	17% (Skyway Marina District)
33705	12%
33713	8%
others	34%

### **2. Do you work or attend school on 34th Street between 22nd Avenue South and 54th Avenue South?**

Yes: 20%

No: 80%

### **3. What do you feel are the most important issues regarding 34th Street?**

	VI	I	NI	NO
Safe accommodations for pedestrians and bicyclists	61%	29%	11%	
Traffic congestion/delays	41%	32%	27%	
Motorist behavior (e.g., speeding, red light running, aggressive driving, etc.)	58%	33%	7%	2%
Need for improved transit service (e.g., less time between stops, later hours,	39%	27%	20%	14%
Lack of retail/shopping establishments and restaurants	59%	22%	17%	2%
Need for public gathering places (e.g., parks, outdoor markets)	56%	23%	21%	
Need for landscaping along the corridor	41%	36%	22%	
Need for mixed-use development (e.g., residential/office or	36%	41%	21%	2%

VI = Very Important; I = Important; NI = Not Important; NO = No Opinion

### **4. Below are improvements proposed to be included in the scheduled resurfacing of 34th Street, 22nd Avenue South to 54th Avenue South.**

**Check the appropriate box corresponding to your preference for each as follows:**

	S	DS	NS
Conversion of outside lanes to shared bus use and right turns (i.e., Business Access and Transit lanes)	54%	36%	10%
Wide sidewalks on both sides of road to accommodate pedestrians and bicyclists	85%	13%	2%
Pedestrian activated crosswalks at multiple locations	80%	18%	2%

S = Support; DS = Don't Support; NS = Not Sure

**5. What types of additional improvements/strategies should be considered for 34th Street South in the future?**

	VI	I	NI	NO
Adding vehicle lanes	12%	18%	62%	8%
Better enforcement of traffic laws	34%	47%	16%	3%
More frequent/expedited bus service	37%	29%	17%	17%
Bus stop amenities (e.g., covered shelters, bike racks, etc.)	47%	29%	12%	12%
Pedestrian friendly land use design (e.g., parking oriented to side or rear of properties, tree canopy along sidewalks and in parking areas, pedestrian connections between properties and surrounding sidewalk network, etc.)	62%	18%	15%	5%
Access management strategies that include shared driveways and sharing parking areas between neighboring land uses	31%	36%	17%	17%
Encouragement of mixed-use development	49%	34%	12%	5%
Provision of public gathering places (e.g., parks, outdoor markets)	55%	20%	20%	5%
Landscaping along corridor and on adjacent properties	47%	30%	17%	7%

*VI = Very Important; I = Important; NI = Not Important; NO = No Opinion*

**Ques. 3 - Other**

Do not take a lane of general purpose vehicle traffic out when traffic is increasing & transit is decreasing, taking a lane of vehicle traffic out will create congestion.

Traffic signals added at key points of entry to 34 th south

The walkways are wide enough, the pinellas trail is accessible. Beautification of CURRENT green space is important. Anyone who actually lives in this neighborhood knows this area is not going to be a social walking area...that is within the neighborhoods

Allowance for crosswalk to safely cross the highway, on foot or bike, at the Aldi, Ceridian cross street. Is a pedestrian overpass possible?

I live in the Disston Heights neighborhood and use the 34th Street corridor often. My concern for the area is the prostitution and having people trying to "shake me down" for money when I am pumping gas at 5th Ave N and 34th St. I no longer stop in that area because of so many incidents.

Better timing of traffic lights to keep traffic moving more smoothly.

Branded restaurants and stores. Remove the indoor flea market type of shopping centers, or the restaurants and shopping centers that are sitting empty for years. Time to get new, and modern shopping and restaurant choices to keep the money in the Marina District. Right now we leave and eat on 4th street or Seminole but we live in a \$450,000 townhouse in the Suntex Marina. There are many well to do people who live here that want the shopping and restaurants here. More jobs and more money will stay local. Get the Sprouts Market and Olive Garden.

Slower traffic speeds to improve safety

An Express bus service on 34th St. would be great. I'd love to see better, more modern bus shelters.

Safer access into/out of businesses located along 34th St S.

Planning seems to have been complete before public comment was sought.

Traffic lights at 42nd Ave S and 34th St S

#### **Ques. 5 - Other**

Those of us that live in the area do not want 34th St. S to turn into 9th St. N where they took out important car lanes & it's impossible to get through the lights (we used to live off 8th St. and 24th Ave.& moved South for more space).

Do not make 99% of people traveling miserable. The view of the Flamingo, storage units, fast food, and XTC ...taking lanes away doesnt make it morebeautiful. Space is ample currently...add trees and dont waste \$ on shrinking the road. Do YOU drive there during winter visitor season? On Sat or Sun during beach season?

Keep us moving foward in this area of St Petersburg! Thank you!

I avoid this area now because its dangerous

It's a pretty nice area once you get rid of all the empty restaurant and shopping center buildings and build new nice complexes and restaurants. Please no check cashing or payday loan type stores. People can go down two blocks for those services.

Protected bike lanes

But will the cyclists use the sidewalks? They make making a right turn very scary for a driver when they're on the road!!

Public sessions might have been more positive if public input had bee sought earlier.

## St. Pete wants to make more room on 34th Street S for buses, sidewalks – less for cars

By [Caitlin Johnston](#)

Published Apr. 3

ST. PETERSBURG — Another major street in the city could lose regular traffic lanes to better accommodate transit, bicyclists and pedestrians.

A view of 34th Street S looking south at the intersection of 22nd Avenue on Wednesday. The city of St. Petersburg is proposing making each outside lane of 34th Street S into bus lanes, from 22nd Avenue to 54th Avenue. Regular motorists could not travel in those lanes, except to make right turns. [LUIS SANTANA | Times]
